Modeling and Visualizing Science and Technology Developments

December 4-5, 2017; Irvine, CA
Organized by Katy Börner, H. Eugene Stanley, William Rouse and Paul Trunfio

Overview

This colloquia was held in Irvine, CA on December 4-5, 2017.

This colloquia brought together researchers and practitioners from multiple disciplines to present, discuss, and advance computational models and visualizations of science and technology (S&T). Existing computational models are being applied by academia, government, and industry to explore questions such as: What jobs will exist in ten years and what career paths lead to success? Which types of institutions will likely be most innovative in the future? How will the higher education cost bubble burst affect these institutions? What funding strategies have the highest return on investment? How will changing demographics, alternative economic growth trajectories, and relationships among nations impact answers to these and other questions? Large-scale datasets (e.g., publications, patents, funding, clinical trials, stock market, social media data) can now be utilized to simulate the structure and evolution of S&T. Advances in computational power have created the possibility of implementing scalable, empirically validated computational models. However, because the databases are massive and multidimensional, both the data and the models tend to exceed human comprehension. How can advances in data visualizations be effectively employed to communicate the data, the models, and the model results to diverse stakeholder groups? Who will be the users of next generation models and visualizations and what decisions will they be addressing.

Videos of the talks are available on the **Sackler YouTube Channel**.

Edited by William B. Rouse, Stevens Institute of Technology, Hoboken, NJ, and accepted by Editorial Board Member Pablo G. Debussche September 12, 2018 (received for review March 14, 2018)

Rapid research progress in science and technology (S&T) and continuously shifting workforce needs exert pressure on each other and on the educational and training systems that link them. Higher education institutions aim to equip new generations of students with skills and expertise relevant to workforce participation for decades to come, but their offerings sometimes misalign with commercial needs and new techniques forged at the frontiers of research. Here, we analyze and visualize the dynamic skill (mis)alignment between academic push, industry pull, and educational offerings, paying special attention to the rapidly emerging areas of data science and data engineering (DS/DE). The visualizations and computational models presented here can help key decision makers understand the evolving structure of skills so that they can craft educational programs that serve workforce needs. Our study uses millions of publications, course syllabi, and job advertisements published between 2010 and 2016. We show how courses mediate between research and jobs. We also discover responsiveness in the academic, educational, and industrial system in how skill demands from industry are as likely to drive skill attention in research as the converse. Finally, we reveal the increasing importance of uniquely human skills, such as communication, negotiation, and persuasion. These skills are currently underexamined in research and undersupplied through education for the labor market. In an increasingly data-driven economy, the demand for "soft" social skills, like teamwork and communication, increase with greater demand for "hard" technical skills and tools.

science of science | job market | data mining | visualization | market gap analysis

Some predictions say hundreds or even thousands of colleges and universities will close or merge in the coming years (4). In addition, there seem to be major discrepancies and delays between leading scientific research, job market needs, and educational content. This has been particularly expressed with respect to science, technology, engineering, and mathematics jobs, where scientific and technological progress is rapid. Strategic decision making on what to teach, whom to hire, and what new research to fund benefits from a systematic analysis of the interplay between science and technology (S&T) developments, courses and degrees offered, and job market needs. Specifically, stakeholders in US higher education urgently need answers to the following questions: (i) Students: what jobs might exist in 5–10 years? What educational trajectories will best achieve my dream job? What core and specialist skills are required for what jobs and offered by what schools and programs? (ii) Teachers: what course updates are most needed? What balance of timely vs. timeless knowledge should I teach? How can I innovate in teaching and maintain job security or tenure? (iii) Universities: what programs should be created? What is my competition doing? How do I tailor programs to fit workforce needs? (iv) Science funders: how can S&T investments improve short- and long-term prosperity? Where will advances in knowledge also yield advances in skills and technology (5)? (v) Employers: what skills are needed next year and in 5 and 10 years? Which institutions produce the right talent? What skills are listed in job advertisements by my competition? How do I hire and train

Education has been a critical vehicle of economic growth and social progress throughout the modern era. Higher education

This paper results from the Arthur M. Sackler Colloquium of the National Academy of Sciences, "Modeling and Visualizing Science and Technology Developments," held December 10–11, 2018, at the National Academy of Sciences, Washington, DC.

Study the **(mis)match** and **temporal dynamics** of S&T progress, education and workforce development options, and job requirements.

Challenges:

- Rapid change of STEM knowledge
- Increase in tools, AI
- Social skills (project management, team leadership)
- Increasing team size

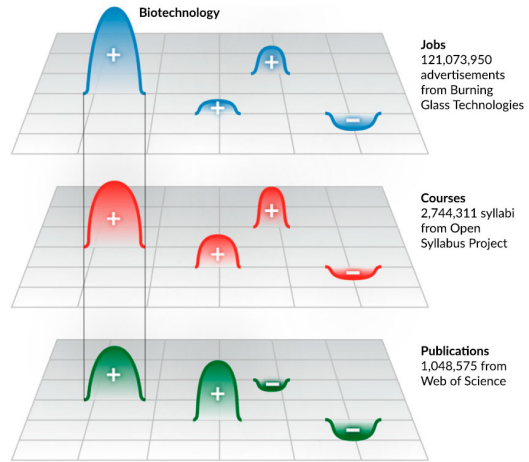

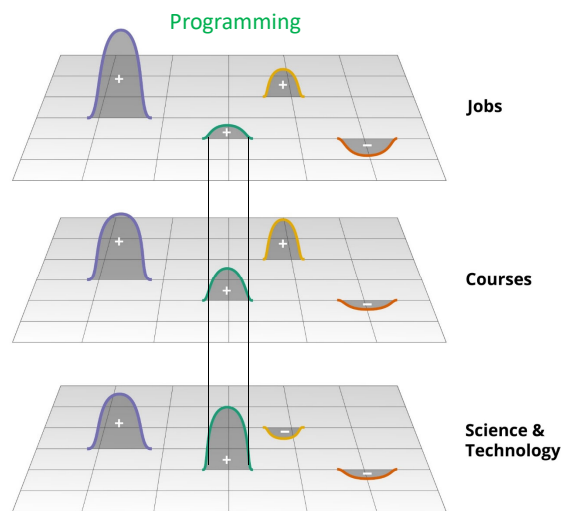

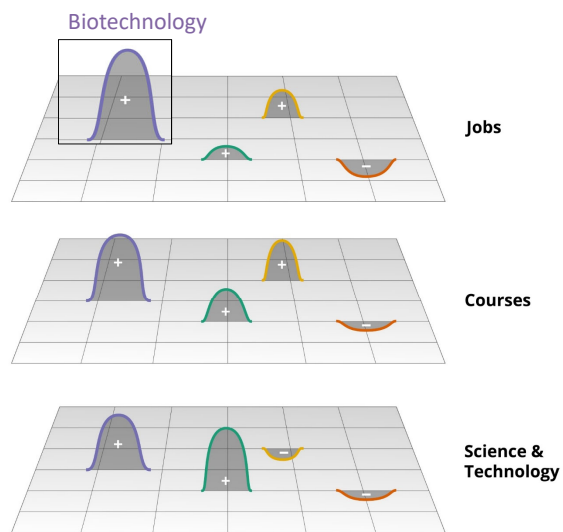

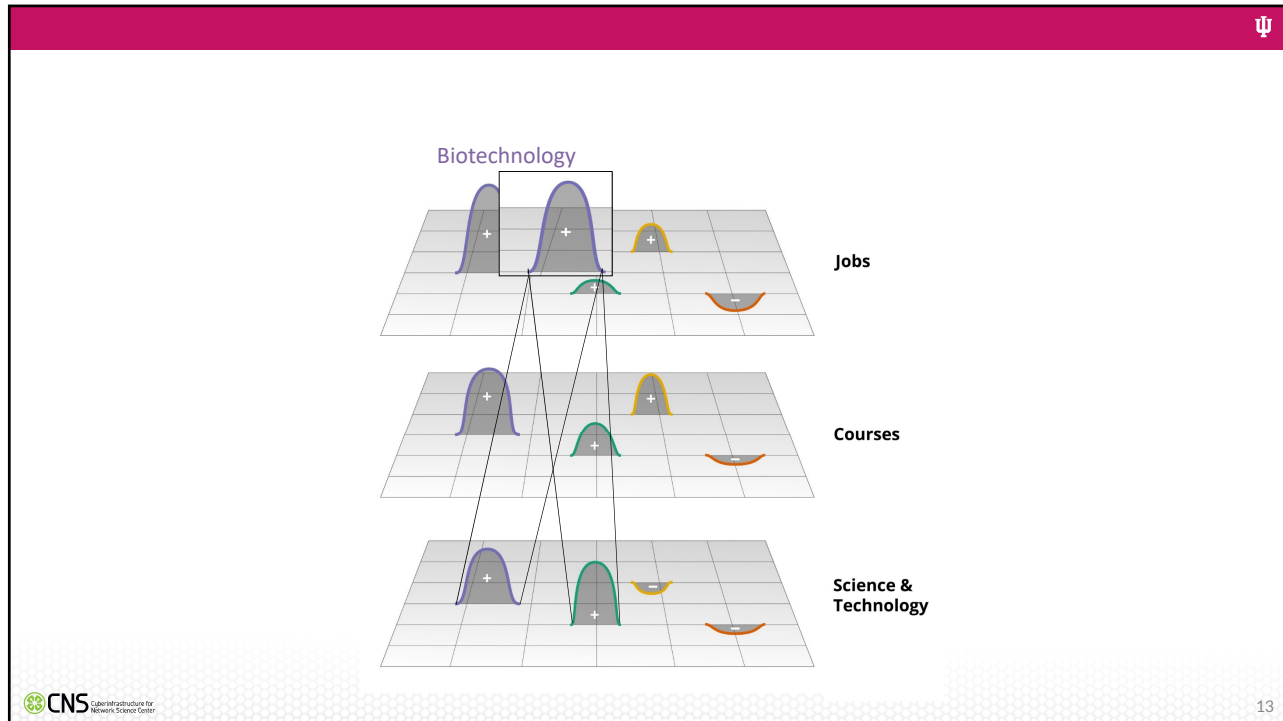

Fig. 1. The interplay of job market demands, educational course offerings, and progress in S&T as captured in publications. Color-coded mountains (+) and valleys (-) indicate different skill clusters. For example, skills related to Biotechnology might be mentioned frequently in job descriptions and taught in many courses, but they may not be as prevalent in academic publications. In other words, there are papers that mention these skills, but labor demand and commercial activity might be outstripping publication activity in this area. The numbers of jobs, courses, and publications that have skills associated and are used in this study are given on the right.

Stakeholders and Insight Needs

- **Students:** What jobs will exist in 1-4 years? What program/learning trajectory is best to get/keep my dream job?
- **Teachers:** What course updates are needed? What balance of timely and timeless knowledge (to get a job vs. learn how to learn) should I teach? How to innovate in teaching and maintain job security or tenure?
- **Universities:** What programs should be created? What is my competition doing? How do I tailor programs to fit local needs?
- **Science Funders:** How can S&T investments improve short- and long-term prosperity? Where will advances in knowledge also yield advances in skills and technology?
- **Employers:** What skills are needed next year and in 5 and 10 years? Which institutions produce the right talent? What skills does my competition list in job advertisements?
- **Economic Developers:** What critical skills are needed to improve business retention, expansion, and recruitment in a region?

What is ROI of my time, money, compassion?

Urgency

- 35% of UK jobs, and 30% in London, are at high risk from automation over the coming 20 years.
<https://www2.deloitte.com/content/dam/Deloitte/uk/Documents/uk-futures/london-futures-agiletown.pdf>
- The aerospace industry and NASA have a disproportionately large percentage of workers aged 50 and older compared to the national average, and up to **half of the current workforce** will be eligible for retirement within the coming five years.
Astronautics AIAA (2012) Recruiting, retaining, and developing a world-class aerospace workforce.
https://www.aiaa.org/uploadedFiles/Issues_and_Advocacy/Education_and_Workforce/Aerospace%20Workforce-%20030112.pdf
- The rise of artificial intelligence will lead to the displacement of **millions of blue-collar as well as white-collar jobs** in the coming decade. Auerswald PE (2017) The Code Economy: A Forty-thousand-year History; Beyer D (2016) The future of machine intelligence: Perspectives from leading practitioners ; Brynjolfsson E, McAfee A (2014) The second machine age: Work, progress, and prosperity in a time of brilliant technologies; Ford M (2015) Rise of the Robots: Technology and the Threat of a Jobless Future.

Education has been a critical vehicle of economic growth and social progress throughout the modern era. Higher education

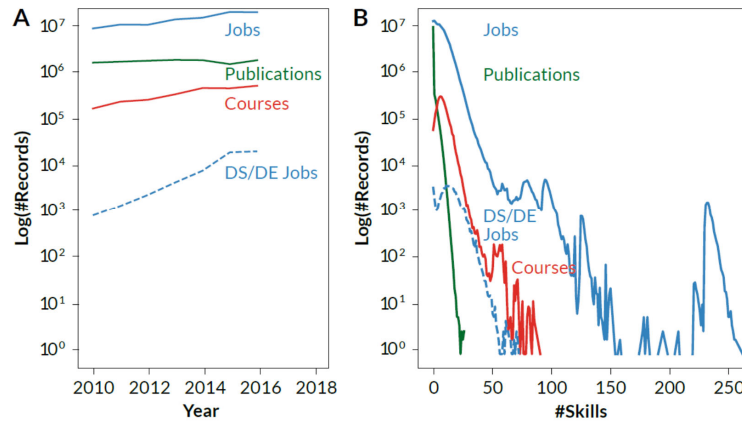

This paper results from the Arthur M. Sackler Colloquium of the National Academy of Sciences, "Modeling and Visualizing Science and Technology Developments," held December 6–8, 2017, at the National Academy of Sciences, Washington, DC. The authors thank the following for their helpful comments: William R. Roux, Steven D. Levina, and the anonymous reviewers.

Datasets Used

Job advertisements by Burning Glass posted between Jan 2010-Dec 2016.

Web of Science publications published Jan 2010-Dec 2016.

Course descriptions from the Open Syllabus Project acquired in June 2018 for courses offered in 2010-2016.

Data Type	#Records	#Records with skills	#Records without skills
All Courses	3,062,277	2,744,311	54,733
All Jobs	132,011,926	121,073,950	10,937,976
DSDE Jobs	69,405	65,944	3,461
All Publications	15,691,162	1,048,575	14,642,587
DSDE Publications	1,048,575	807,756	240,819

Fig. 2. Basemap of 13,218 skills. In this map, each dot is a skill, triangles identify skill clusters, and squares represent skill families from the Burning Glass (BG) taxonomy. Labels are given for all skill family nodes and for the largest skill cluster (NA) to indicate placement of relevant subtrees. Additionally, hard and soft skills are overlaid using purple and orange nodes, respectively; node area size coding indicates base 10 log of skill frequency in DS/DE jobs. Skill area computation uses Voronoi tessellation.

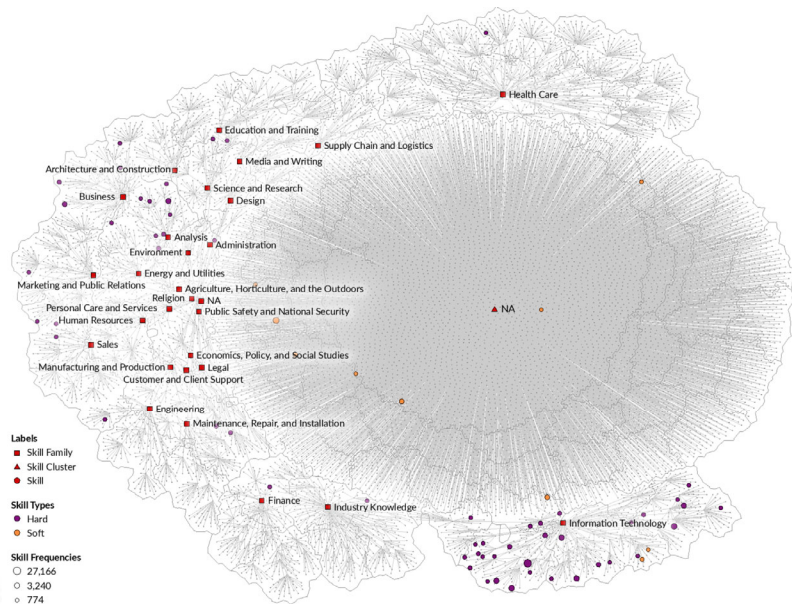

Fig. 3. Basemap of 13,218 skills with overlays of skill frequency in jobs, courses, and publications. This figure substantiates the conceptual drawing in Fig. 1 using millions of data records. Jobs skills are plotted in blue, courses are in red, and publications are in green. Node area size coding indicates base 10 log of skills frequency. The top 20 most frequent skills are labeled, and label sizes denote skill frequency.

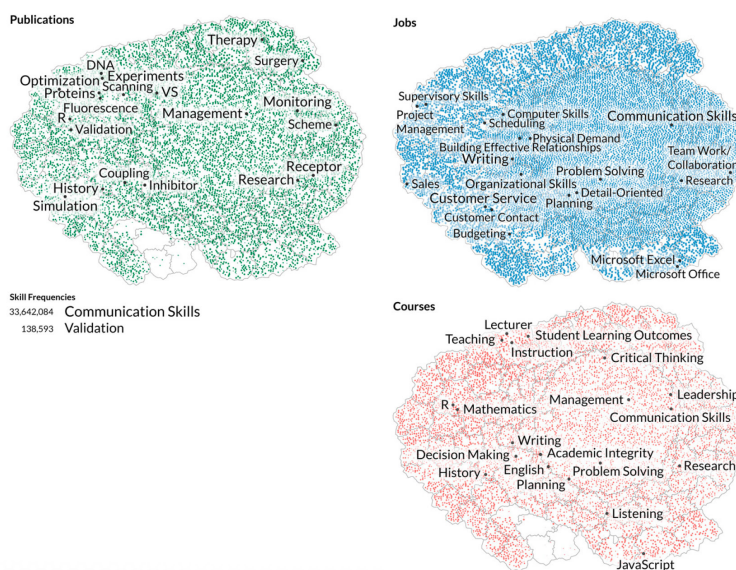

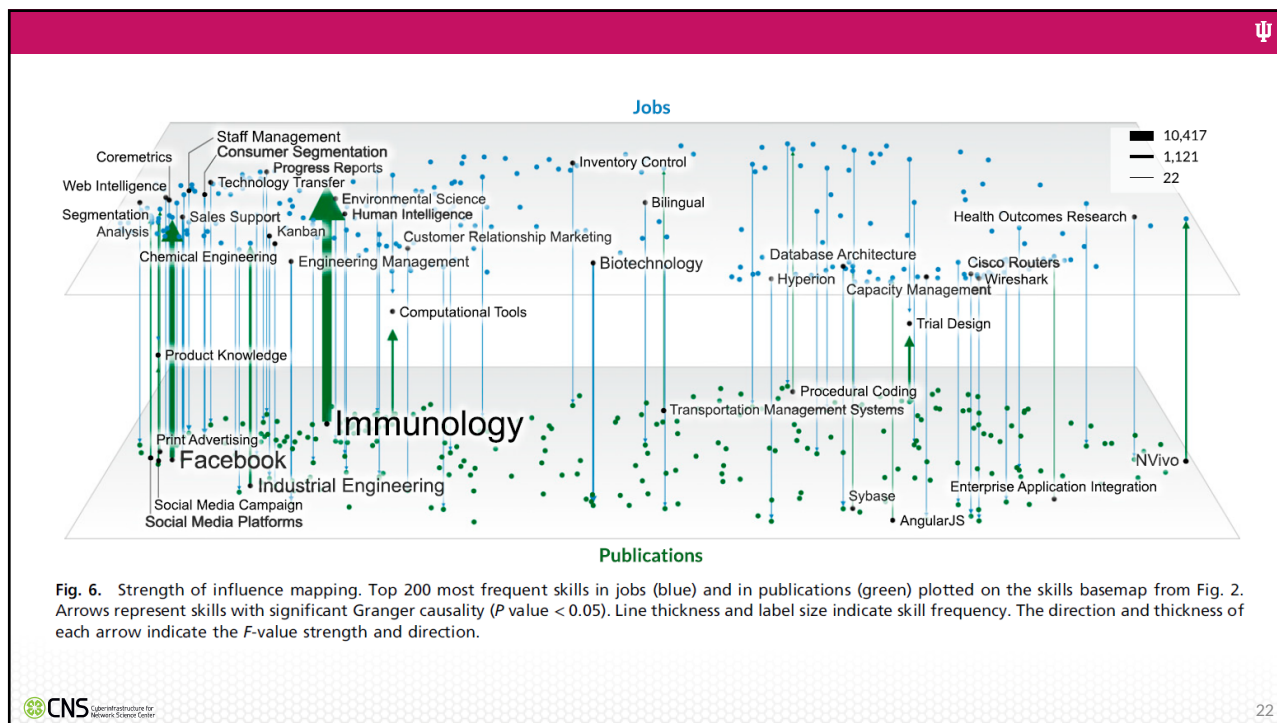

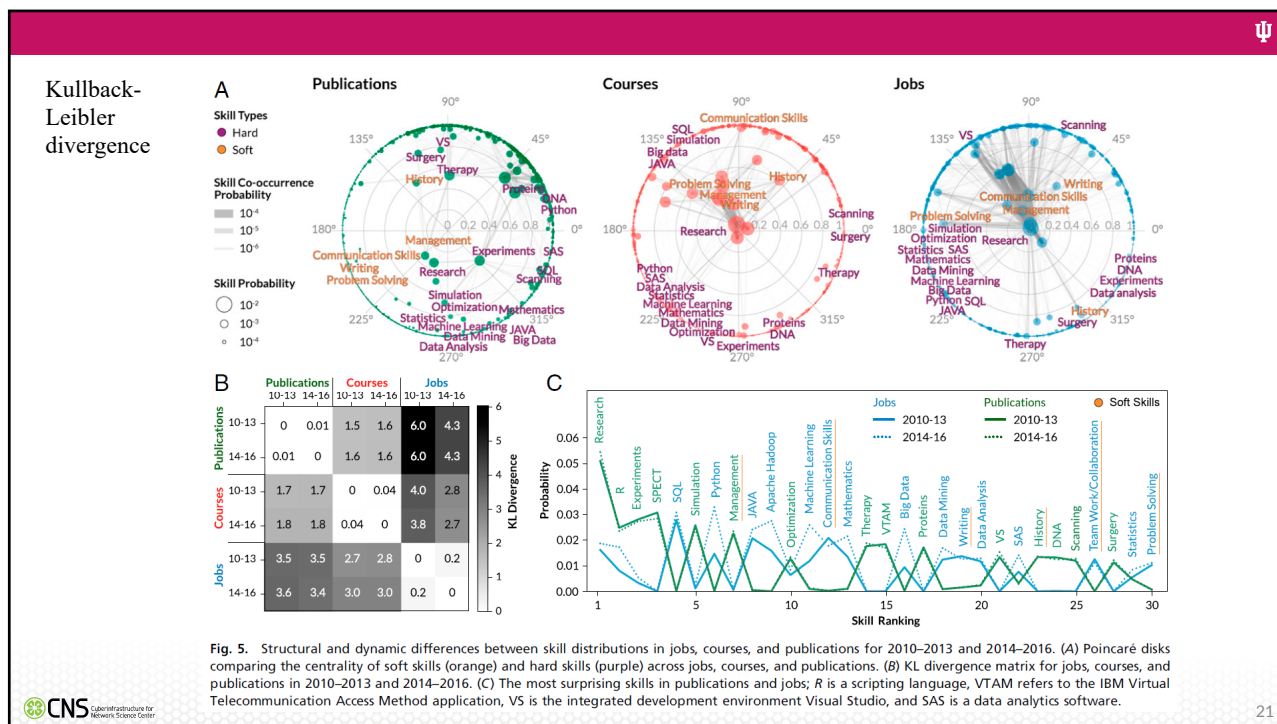

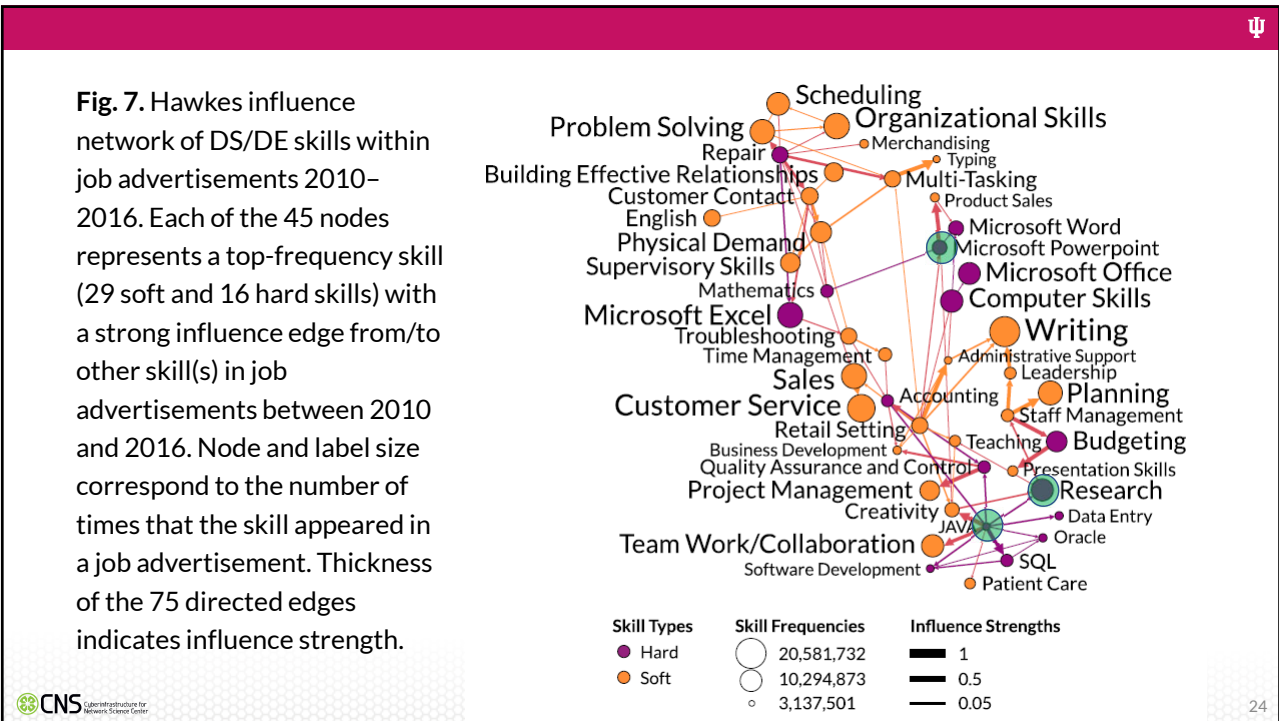

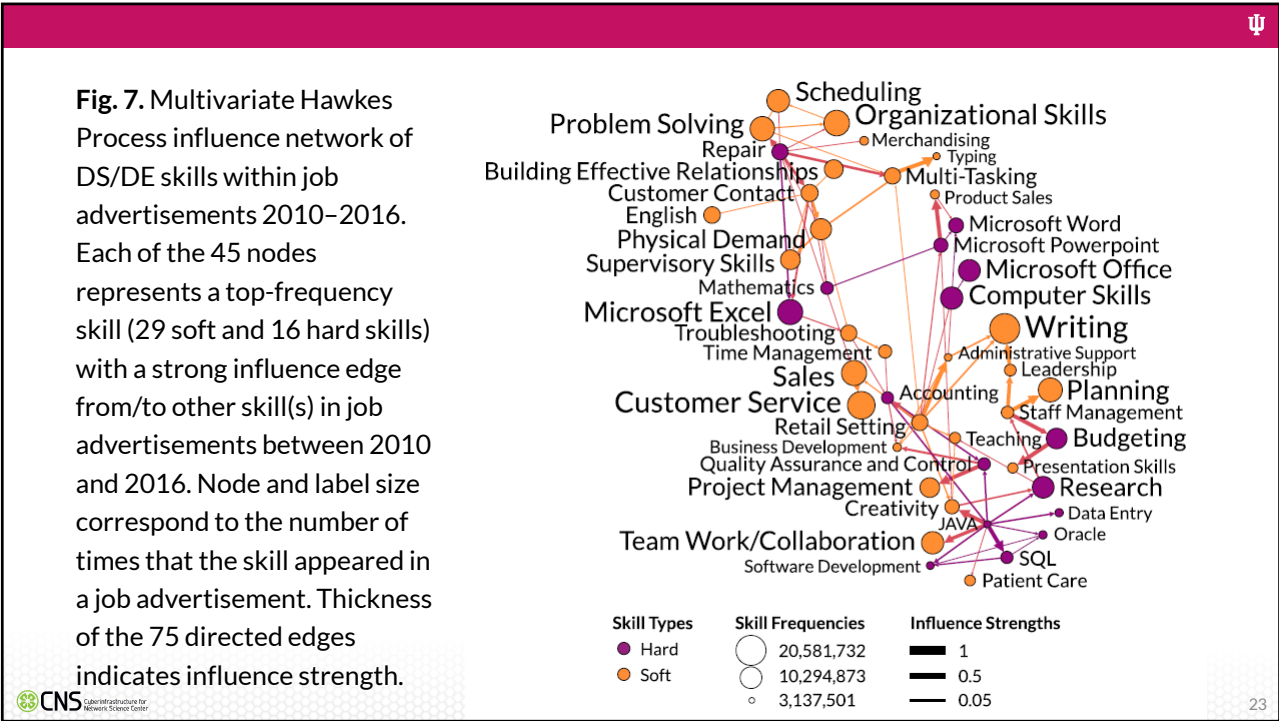

Fig. 4. Burst of activity in DS/DE skills in jobs and publications. Each burst is rendered as a horizontal bar with a start and an end date; skill term is shown on the left. Skills that burst in jobs are blue; skills bursting in publications are green. Seven skills burst in both datasets during the same years and are shown in gray. HRMS stands for human resources management system, and Maximo is an IBM system for managing physical assets.

Results

- Novel cross-walk for mapping publications, course offerings, and job via skills.
- Timing and strength of burst of activity for skills (e.g., Oracle, Customer Service) in publications, course offerings, and job advertisements.
- Uniquely human skills such as communication, negotiation, and complex service provision are currently underexamined in research and undersupplied through education for the labor market in an increasingly automated and AI economy.
- The same pattern manifests in the domain of DS/DE where teamwork and communication skills increase in value with greater demand for data analytics skills and tools.
- Skill demands from industry are as likely to drive skill attention in research as the converse.

NSF RAISE: C-Accel Pilot - Track B1: Analytics-Driven Accessible Pathways To Impacts-Validated Education (ADAPTIVE)

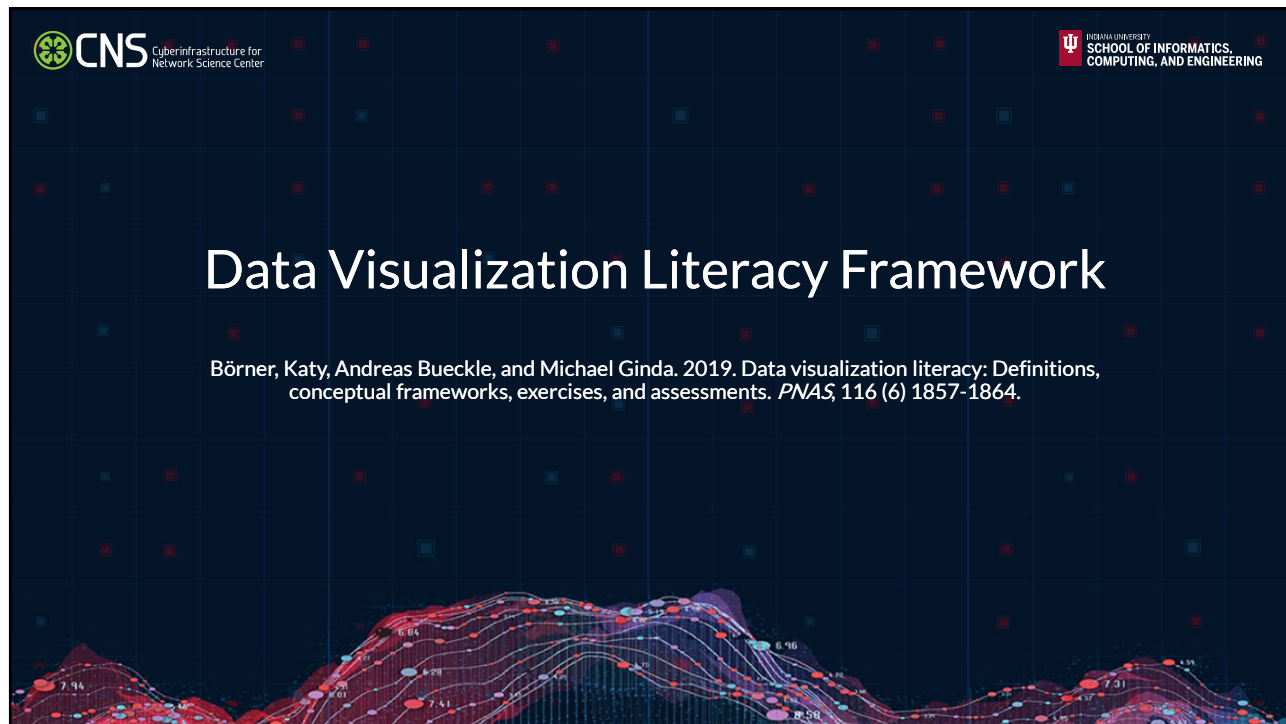

Goal: Development of data-driven tools to support the tens of millions of US workers whose jobs are being transformed by Artificial Intelligence (AI) and automation.

The project will demonstrate how labor market and course syllabi data, learning analytics, and insights on transferability of learned skills can be combined and visualized in novel ways to support a learner's decision-making about, sustained engagement in, and application to their job of professional skills acquired through education and job-related training.

Team B-6656: Katy Börner, Indiana University, Ariel Anbar, Arizona State University, Kemi Jona, Northeastern University, Martin Storksdieck and Heather Fischer, Oregon State University

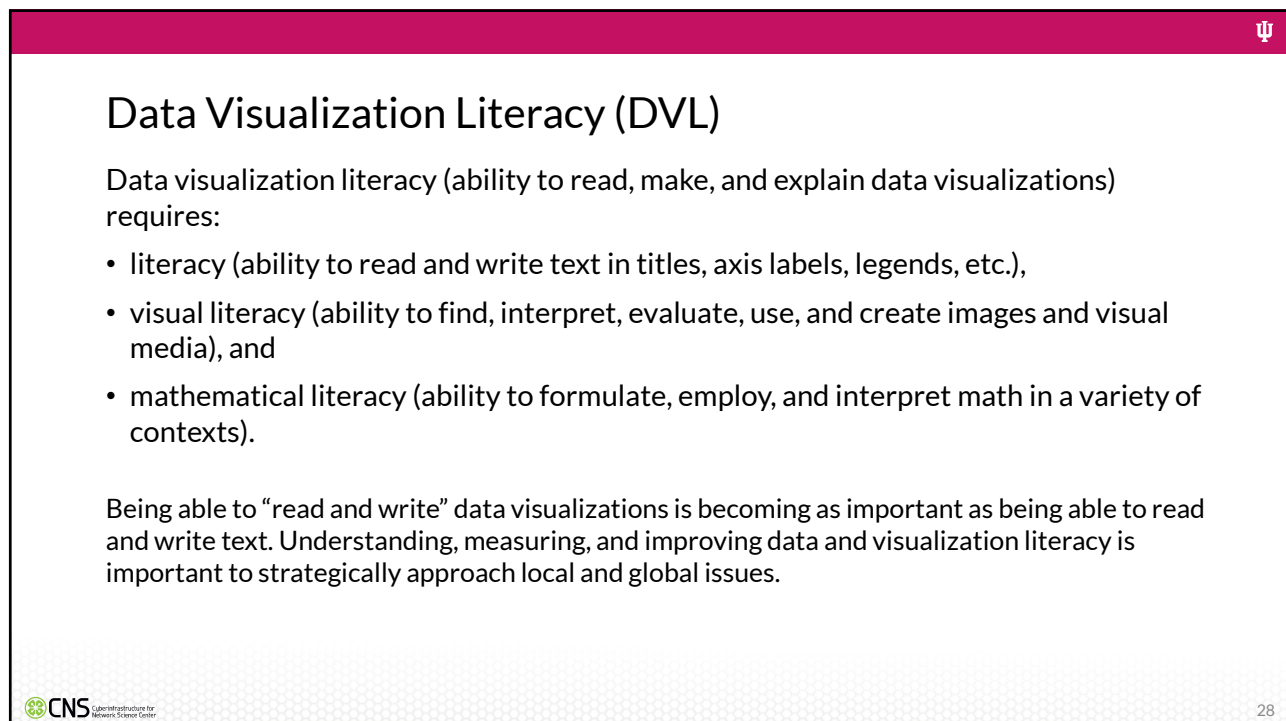

The slide features a dark blue background with a grid of small, colorful squares (red, blue, green) and a network visualization at the bottom. The network consists of nodes connected by lines, with some nodes highlighted in red and blue. The text is centered and white.

COMPUTING, AND ENGINEERING

Data Visualization Literacy Framework

Börner, Katy, Andreas Bueckle, and Michael Ginda. 2019. Data visualization literacy: Definitions, conceptual frameworks, exercises, and assessments. *PNAS*, 116 (6) 1857-1864.

The slide has a white background with a pink header bar on the right side containing a Psi symbol. The text is black and left-aligned.

Data Visualization Literacy (DVL)

Data visualization literacy (ability to read, make, and explain data visualizations) requires:

- literacy (ability to read and write text in titles, axis labels, legends, etc.),
- visual literacy (ability to find, interpret, evaluate, use, and create images and visual media), and
- mathematical literacy (ability to formulate, employ, and interpret math in a variety of contexts).

Being able to “read and write” data visualizations is becoming as important as being able to read and write text. Understanding, measuring, and improving data and visualization literacy is important to strategically approach local and global issues.

CNS Cyberinfrastructure for Network Science Center

28

DVL Framework: Desirable Properties

- Most existing frameworks focus on **READING**. We believe that much expertise is gained from also **CONSTRUCTING** data visualizations.
- Reading and constructing data visualizations needs to take human perception and cognition into account.
- Frameworks should build on and consolidate prior work in cartography, psychology, cognitive science, statistics, scientific visualization, data visualization, learning sciences, etc. in support of a de facto standard.
- Theoretically grounded + practically useful + easy to learn/use.
- Highly modular and extendable.

DVL Framework: Development Process

- The initial DVL-FW was developed via an extensive literature review.
- The resulting DVL-FW typology, process model, exercises, and assessments were then tested in the *Information Visualization* course taught for more than 17 years at Indiana University. More than 8,500 students enrolled in the IVMOOC version (<http://ivmooc.cns.iu.edu>) over the last six years.
- The FW was further refined using feedback gained from constructing and interpreting data visualizations for 100+ real-world client projects.
- Data on student engagement, performance, and feedback guided the continuous improvement of the DVL-FW typology, process model, and exercises for defining, teaching, and assessing DVL.
- The DVL-FW used in this course supports the systematic construction and interpretation of data visualizations.

Data Visualization Literacy Framework (DVL-FW)

Consists of two parts:

DVL Typology

Defines 7 types with 4-17 members each.

- | | | | | | | |
|--|--|--|---|---|--|--|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| Insight Needs <ul style="list-style-type: none"> • categorize/cluster • order/rank/sort • distributions (also outliers, gaps) • comparisons • trends (process and time) • geospatial • compositions (also of text) • correlations/relationships | Data Scales <ul style="list-style-type: none"> • nominal • ordinal • interval • ratio | Analyses <ul style="list-style-type: none"> • statistical • temporal • geospatial • topical • relational | Visualizations <ul style="list-style-type: none"> • table • chart • graph • map • tree • network | Graphic Symbols <ul style="list-style-type: none"> • geometric symbols • point • line • area • surface • volume • linguistic symbols • text • numerals • punctuation marks • pictorial symbols • images • icons • statistical glyphs | Graphic Variables <ul style="list-style-type: none"> • spatial • position • retinal • form • color • optics • motion | Interactions <ul style="list-style-type: none"> • zoom • search and locate • filter • details-on-demand • history • extract • link and brush • projection • distortion |

DVL Workflow Process

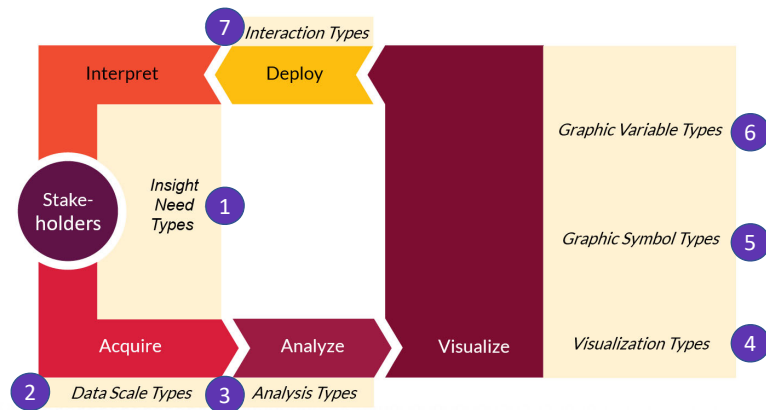

Defines 5 steps required to render data into insights.

Data Visualization Literacy Framework (DVL-FW)

Consists of two parts that are interlinked:

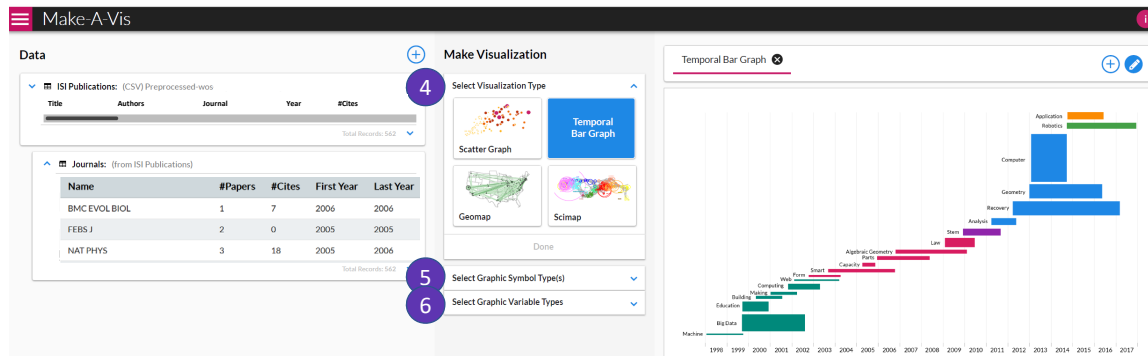

DVL Typology + DVL Workflow Process

Data Visualization Literacy Framework (DVL-FW)

Implemented in Make-A-Vis (MAV) to support learning via horizontal transfer, scaffolding, hands-on learning, etc.

Typology of the Data Visualization Literacy Framework

1

Insight Needs

- categorize/cluster
- order/rank/sort
- distributions (also outliers, gaps)
- comparisons
- trends (process and time)
- geospatial
- compositions (also of text)

Börner, Katy. 2015. *Atlas of Knowledge: Anyone Can Map*. Cambridge, MA: The MIT Press. 26-27.

Bertin, 1967	Wehrend & Lewis, 1996	Few, 2004	Yau, 2011	Rendgen & Wiedemann, 2012	Frankel, 2012	Tool: Many Eyes	Tool: Chart Chooser	Börner, 2014
selection	categorize			category				categorize/cluster
order	rank	ranking					table	order/rank/sort
	distribution	distribution					distribution	distributions (also outliers, gaps)
	compare	nominal comparison & deviation	differences		compare and contrast	compare data values	comparison	comparisons
		time series	patterns over time	time	process and time	track rises and falls over time	trend	trends (process and time)
		geospatial	spatial relations	location		generate maps		geospatial
quantity		part-to-whole	proportions		form and structure	see parts of whole, analyze text	composition	compositions (also of text)
association	correlate	correlation	relationships	hierarchy		relations between data points	relationship	correlations/relationships

Typology of the Data Visualization Literacy Framework

6

Insight Needs

- categorize/cluster
- order/rank/sort
- distributions (also outliers, gaps)
- comparisons
- trends (process and time)
- geospatial
- compositions (also of text)
- correlations/relationships

Data Scales

- nominal
- ordinal
- interval
- ratio

Analyses

- statistical
- temporal
- geospatial
- topical
- relational

Visualizations

- table
- chart
- graph
- map
- tree
- network

Graphic Symbols

- geometric symbols
 - point
 - line
 - area
 - surface
 - volume
- linguistic symbols
 - text
 - numerals
 - punctuation marks
- pictorial symbols
 - images
 - icons
 - statistical glyphs

Graphic Variables

- spatial
 - position
- retinal
 - form
 - color
 - optics
 - motion

Interactions

- zoom
- search and locate
- filter
- details-on-demand
- history
- extract
- link and brush
- projection
- distortion

Börner, Katy. 2015. *Atlas of Knowledge: Anyone Can Map*. Cambridge, MA: The MIT Press. 34-35.

Graphic Variable Types

Position: x, y; possibly z

Form:

- Size
- Shape
- Rotation (Orientation)

Color:

- Value (Lightness)
- Hue (Tint)
- Saturation (Intensity)

Optics: Blur, Transparency, Shading, Stereoscopic Depth

Texture: Spacing, Granularity, Pattern, Orientation, Gradient

Motion: Speed, Velocity, Rhythm

Graphic Symbol Types

		Geometric Symbols		Linguistic Symbols	Pictorial Symbols
		Point	Line		
Spatial	Position	X Y			
	Form	Size			Text Text Text
Retinal	Form	Shape			Text Text Text
	Color	Value			Text Text Text
	Color	Hue			Text Text Text
	Color	Saturation			Text Text Text
	Texture	Granularity			
	Texture	Pattern			
	Optics	Blur			Text Text Text
Motion	Speed				

See *Atlas of Knowledge* pages 36-39 for complete table.

Qualitative

Also called:
Categorical Attributes
Identity Channels

Quantitative

Also called:
Ordered Attributes
Magnitude Channels

Graphic Variable Types Versus Graphic Symbol Types

		Point	Line	Area		Surface	Volume	Linguistic Symbols	Pictorial Symbols
				Area	Area			Text, Numbers, Specification Marks	Images, Icons, Statistical Graphs
Spatial	Position								
	Form	Size	Shape	Color	Color	Color	Color	Text	Image
Retinal	Form	Rotation	Curvature	Angle	Close	Value	Hue	Saturation	Granularity
	Color	Hue	Saturation	Granularity	Pattern	Orientation	Gradient	Blur	Transparency
	Optics	Blur	Transparency	Shading	Stereoscopic Depth	Speed	Velocity	Relative	Relative
	Motion	Speed	Velocity	Relative	Relative	Relative	Relative	Relative	Relative
	Motion	Speed	Velocity	Relative	Relative	Relative	Relative	Relative	Relative
	Motion	Speed	Velocity	Relative	Relative	Relative	Relative	Relative	Relative
	Motion	Speed	Velocity	Relative	Relative	Relative	Relative	Relative	Relative

See *Atlas of Knowledge* pages 36-39 for complete table.

CNS Cyberinfrastructure for Network Science Center

INDIANA UNIVERSITY SCHOOL OF INFORMATICS, COMPUTING, AND ENGINEERING

Visual Analytics Certificate

Advance your skills in one of the most in demand careers through this six-week (3 CEUs) online course focused on understanding and creating data visualizations that translate complex data into actionable insights.

[DOWNLOAD FLYER](#) [REGISTER FOR JAN 20-MAR 1, 2020](#)

Learn from Experts

Connect with industry professionals and leading researchers.

Evolve Yourself

Gain forever knowledge and skill-up in powerful data visualization tools.

Make a Difference

Embrace data-driven decision-making in your personal and professional life.

Places & Spaces: Mapping Science Exhibit

1st Decade (2005-2014)

Maps

2nd Decade (2015-2024)

Macroscopes

100

MAPS
in large format, full color, and high resolution.

248

MAPMAKERS
from fields as disparate as art, urban planning, engineering, and the history of science.

43

MACROSCOPE MAKERS
including one whose job title is "Truth and Beauty Operator."

20

MACROSCOPES
for touching all kinds of data.

382

DISPLAY VENUES
from the Cannes Film Festival to the World Economic Forum.

354

PRESS ITEMS
including articles in *Nature*, *Science*, *USA Today*, and *Wired*.

Map of Scientific Collaborations from 2005-2009

Computed Using Data from Elsevier's Scopus

VII.6 Stream of Scientific Collaborations Between World Cities - Olivier H. Beauchesne - 2012

VII.10 History of Science Fiction - Ward Shelley - 2011

Check out our Zoom Maps online!

VII.10
History of Science Fiction, by Ward Shelley
© 2011 Ward Shelley

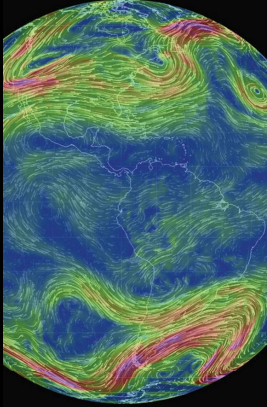

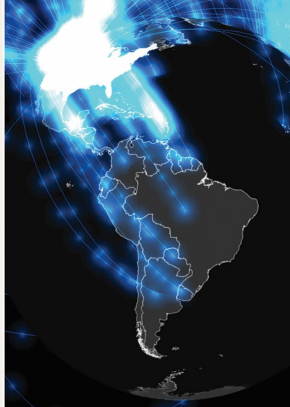

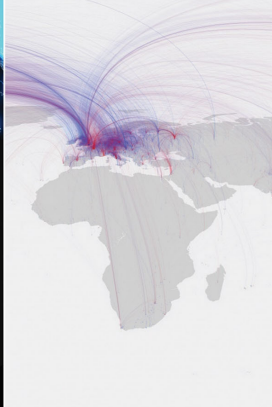

Ward Shelley is an artist identified with the Williamsburg scene in Brooklyn, New York, and is known for his large-scale, colorful, and intricate maps. This map, 'History of Science Fiction', is a complex and detailed work that explores the evolution of the genre. It is a testament to his skill as a cartographer and his passion for the subject.

Megaregions of the US –Garrett Dash Nelson and Alasdair Rae – 2016

Iteration XII (2016)

Macrosopes for Making Sense of Science

Iteration XIII (2017)

Macrosopes for Playing with Scale

Iteration XIV (2018)

Macrosopes for Ensuring our Well-being

Iteration XV (2019)

Macrosopes for Tracking the Flow of Resources

Acknowledgments

Exhibit Curators

The exhibit team: Lisel Record, Katy Börner, and Todd Theriault.

<http://scimaps.org>

Plus, we thank the more than 250 authors of the 100 maps and 16 interactive macroscopes.

Exhibit Advisory Board

Gary Berg-Cross
Cognitive psychologist (PhD, SUNY-Stony Brook), Potomac, MD, USA

André Skupin
Associate Professor of Geography at San Diego State University, California

Donna J. Cox, MFA, Ph.D.
Director of the Advanced Visualization Laboratory at the National Center for Supercomputing Applications, University of Illinois at Urbana-Champaign, IL, USA

Moritz Stefaner
Freelance designer on the crossroads of data visualization, information aesthetics, and user interface design in Germany

Bonnie DeVarco
Media X Distinguished Visiting Scholar at Stanford University, Palo Alto, CA, USA

Olga Subirós
Curator of Big Bang Data and Founder of Olga Subirós Studio in Barcelona, Spain

Peter A. Hook
Head of Digital and Scholarly Services and Law&Xiv Administrator, Cornell Law Library, Ithaca, NY, USA

Stephen Uzzo
Vice President of Science and Technology for the New York Hall of Science

Francis Harvey
Professor of Visual Communication in Geography at the Leibnitz Institute for Regional Geography, Leipzig University, Germany

Benjamin Wiederkehr
Founding Partner and Managing Director of Interactive Things in Zürich, Switzerland

Lev Manovich
Professor, The Graduate Center, City University of New York; Director, Software Studies Initiative (big data, digital humanities, visualization)

Interdisciplinary Training in Complex Networks and Systems

RESOURCES / TWITTER

THE PROGRAM RESEARCH HOW TO APPLY STUDENTS COLLOQUIA NEWS

The program f Share t Tweet e Email

Understanding complex networked systems is key to solving some of the most vexing problems confronting humankind, from discovering how dynamic brain connections give rise to thoughts and behaviors, to detecting and preventing the spread of misinformation or unhealthy behaviors across a population. Graduate training, however, typically occurs in one of two dimensions: experimental and observational methods in a specific area such as biology and sociology, or in general methodologies such as machine learning and data science.
