The Rise of Science and Technology

Papers & Wikipedia Entries

3

4

2005 World Population

The population map uses a quarter degree box resolution. Boxes with zero people are given in white. Darker shades of red indicate higher population counts per box using a logarithmic interpolation. The highest density boxes appear in Mumbai, with 11,687,850 people in the quarter degree block, Calcutta (10,816,010), and Shanghai (8,628,088).

5

2007 IP Address Ownership

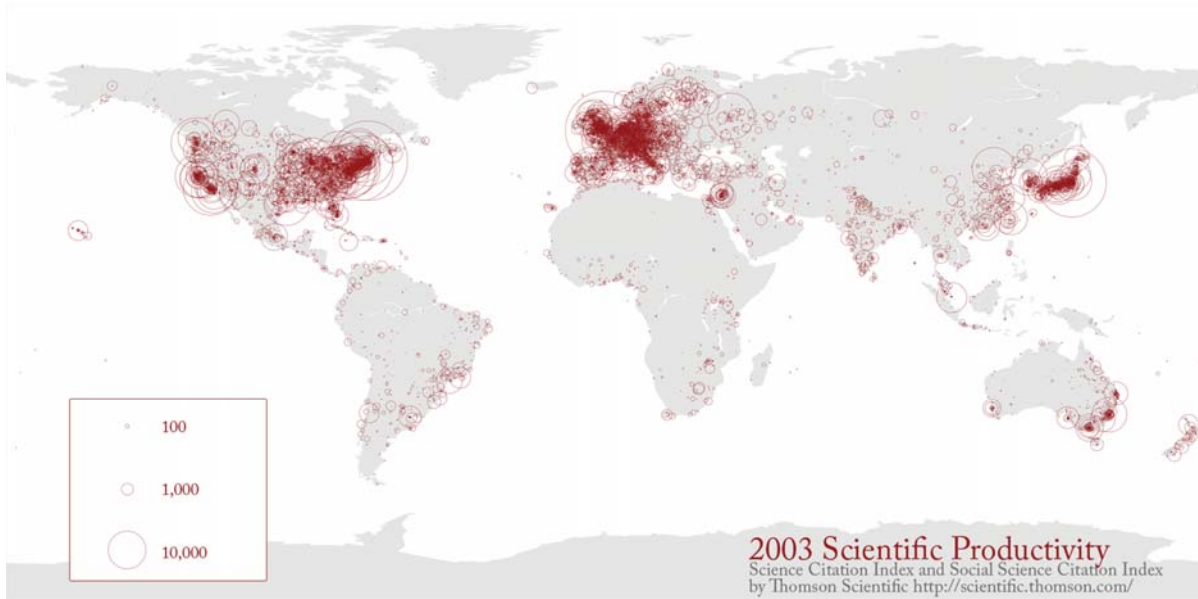

This map shows IP address ownership by location. Each owner is represented by a circle and the area size of the circle corresponds to the number of IP addresses owned. The largest circle denotes MIT's holdings of an entire class A subnet, which equates to 16,581,375 IP addresses. The countries that own the most IP addresses are US (560 million), Japan (130 million), Great Britain (47 million).

6

2003 Scientific Productivity

Shown is where science is performed today. Each circle indicates a geographic location at which scholarly papers are published. The larger the circle the more papers are produced. Boston, MA, London, England, and New York, NY are the top three paper production areas. Note the strong resemblance with the Night on Earth and the IP Ownership maps and the striking differences to the world population map.

7

2000 Night on Earth

This image shows city lights at night. It was composed from hundreds of pictures made by orbiting satellites. The seaboard of Europe, the eastern United States, and Japan are particularly well lit. Many cities exist near rivers or oceans so that goods can be exchanged cheaply by boat. The central parts of South America, Africa, and Australia are rather dark despite their high population density, see map to the left.

8

Early Maps of the World **VERSUS** Early Maps of Science

3D
 Physically-based
 Accuracy is measurable
 Trade-offs have more to do with granularity
 2-D projections are very accurate at local levels
 Centuries of experience
Geo-maps can be a template for other data

n-D
 Abstract space
 Accuracy is difficult
 Trade-offs indirectly affect accuracy
 2-D projections neglect a great deal of data
 Decades of experience
Science maps can be a template for other data

Kevin W. Boyack, UCGIS Summer Meeting, June, 2009

20

Studying the Emerging Global Brain: Analyzing and Visualizing the Impact of Co-Authorship Teams

Börner, Dall'Asta, Ke & Vespijnani (2005)
Complexity, 10(4):58-67.

Research question:

- Is science driven by prolific single experts or by high-impact co-authorship teams?

Contributions:

- New approach to allocate citational credit.
- Novel weighted graph representation.
- Visualization of the growth of weighted co-author network.
- Centrality measures to identify author impact.
- Global statistical analysis of paper production and citations in correlation with co-authorship team size over time.
- Local, author-centered entropy measure.

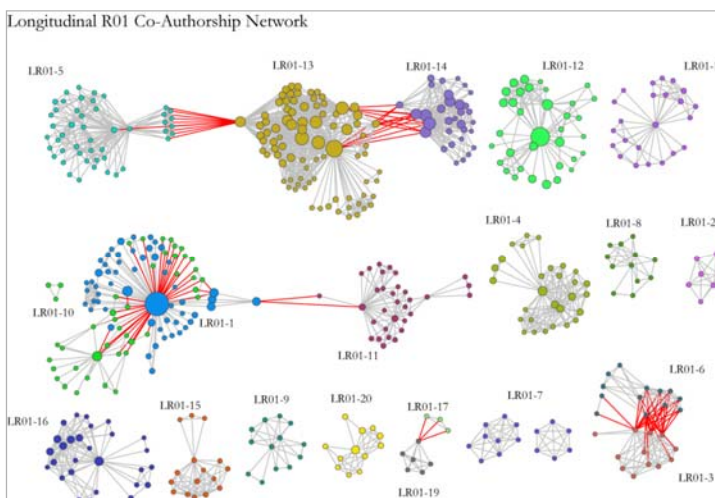

21

Mapping Transdisciplinary Tobacco Use Research Centers Publications

Compare R01 investigator based funding with TTURC Center awards in terms of number of publications and evolving co-author networks.

5287-5290.*

23

Spatio-Temporal Information Production and Consumption of Major U.S. Research Institutions

*Börner, Katy, Penumarthy, Shashikant, Meiss, Mark and Ke, Weimao. (2006)
Mapping the Diffusion of Scholarly Knowledge Among Major U.S. Research
Institutions. Scientometrics. 68(3), pp. 415-426.*

Research questions:

1. Does space still matter in the Internet age?
2. Does one still have to study and work at major research institutions in order to have access to high quality data and expertise and to produce high quality research?
3. Does the Internet lead to more global citation patterns, i.e., more citation links between papers produced at geographically distant research institutions?

Contributions:

- Answer to Qs 1 + 2 is YES.
- Answer to Qs 3 is NO.
- Novel approach to analyzing the dual role of institutions as information producers and consumers and to study and visualize the diffusion of information among them.

About

This Illuminated Diagram display adds the flexibility of an interactive program to the incredibly high data density of a print. This technique is generally useful when there is too much pertinent data to be displayed on a screen but the data is relatively stable. The computer can direct the eye to what's important by using projectors or screens as smart spotlights, animating the research impact of individuals, giving a "grand tour" of science, or highlighting query results (as when you touch the lectern or use the keyboard) with an overlay of moving light.

Elinor Ostrom - Nobel Prize in Economic Sciences 2009

Born: 7 August 1933, New York, NY, USA
Affiliation at the time of the award: Indiana University, Bloomington, IN, USA, Arizona State University, Tempe, AZ, USA
Prize motivation: "for her analysis of economic governance, especially the commons"
Field: Economic governance
Contribution: Challenged the conventional wisdom by demonstrating how local property can be successfully managed by local commons without any regulation by central authorities or privatization.

Search

The keyboard supports retrieval and display of papers based on their Medical Subject Headings (MeSH) and MeSH qualifier terms. If multiple terms are entered in a field, they are automatically combined using "OR". So, "breast cancer" matches any record with "breast" or "cancer" in that field. You can put AND between terms to combine with "AND". Thus "breast AND cancer" would only match records that contain both terms. Double quotation can be used to match compound terms, e.g., "breast cancer" retrieves records with the phrase "breast cancer", and not records where "breast" and "cancer" are both present, but the exact phrase.

Sci2 Tool v1.0 Alpha (June 13, 2012)

Major Release

featuring a Web services compatible CShell v2.0 (<http://cishell.org>)

New Features

- Google Scholar citation reader
- New visualizations such as
 - geospatial maps
 - science maps
 - bi-modal network layout
- R statistical tool bridging
- Gephi visualization tool bridging
- Comprehensive online documentation

Release Note Details

37

New Visualizations

Types

- Geospatial maps: **Choropleth Map** and **Proportional Symbol Map**
- **Science Map**: Based on 25,000 journals or 554 subdisciplines.
- **Bi-Modal Network Layout**

Shared Features

- Uniform layout
- Scalable to extremely large datasets as rendered into PS, PDF files.
- Header information on file mapped and footer information
- Automatic legend generation
- ‘How To Read This Map’ information
- Additional pages for details
- Color coding suitable for black and white printout and color blind users

Right side:
Alphabetical

How To Read This Map

This bipartite network shows two record types and their interconnections. Each record is represented by a labeled circle that is size coded by a numerical attribute value. Records of each type are vertically aligned and sorted, e.g., by node size or alphabetically. Links between records of different type may be weighted as represented by line thickness.

See end of PDF for legend.

Area

How To Read This Map

This temporal bar graph visualization represents each record as a horizontal bar with a specific start and end date and a text label on its left side. The area of each bar encodes a numerical attribute value, e.g., total amount of funding. Bars may be colored to present categorical attribute values of records.

CNS (cns.iu.edu)

42

New Visualizations

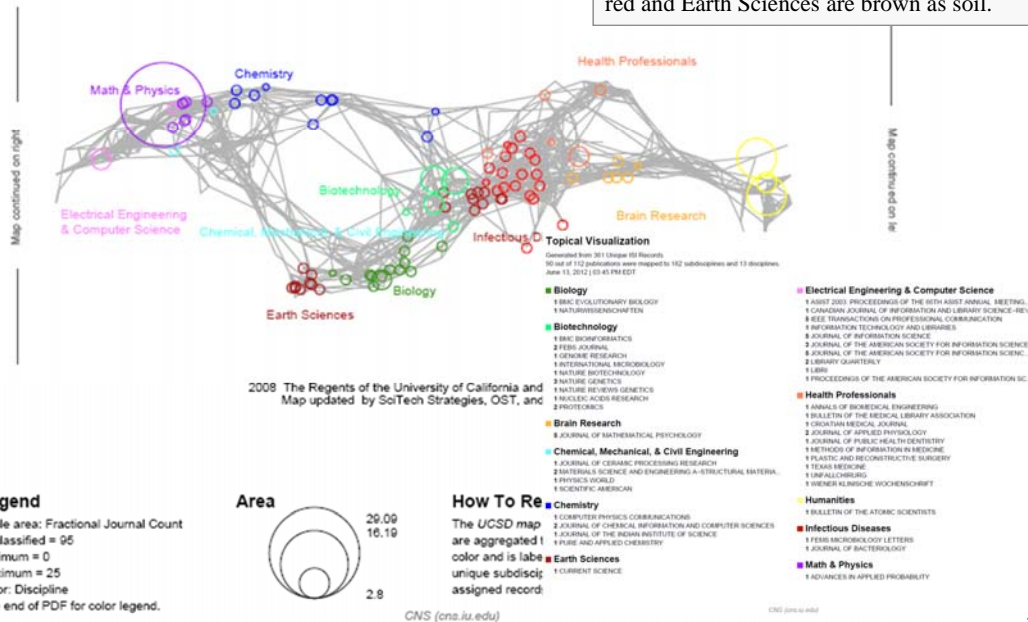

Data: WoS and Scopus paper level data for 2001–2010, about 25,000 separate journals, proceedings, and series.

Similarity Metric: Combination of bibliographic coupling and keyword vectors.

Number of Disciplines: 554 journal clusters further aggregated into 13 main scientific disciplines that are labeled and color coded in a metaphorical way, e.g., Medicine is blood red and Earth Sciences are brown as soil.

Topical Visualization

Generated from 361 Unique ISI Records of 4 NetSci Researchers
14 out of 109 publications were mapped to 94 subdisciplines and 12 disciplines.
June 05, 2012 | 05:39 PM EDT

Area

How To Read This Map

The UCSD map of science depicts a network of 554 subdiscipline nodes that are aggregated to 13 main disciplines of science. Each discipline has a distinct color and is labeled. Overlaid are circles, each representing all records per unique subdiscipline. Circle area is proportional to the number of fractionally assigned records. Minimum and maximum data values are given in the legend.

Geomap with Gephi Network Overlay

See 4.7.6 on <http://sci2.wiki.cns.in.edu>

File with geolocations and linkage info, e.g., an isi bibliography file.

Use Yahoo! Geocoder to identify Latitude, Longitude for each geolocation
 Extract attributes per geolocation, e.g., total times cited (TC)
 Extract linkages and their attributes, e.g., number of co-occurrences
 See sample /geo/LaszloBarabasiGeo.net with co-occurrence of "Research Addresses" and full counting of TC per geolocation.

Read into Sci2 Tool to generate geomap and network file

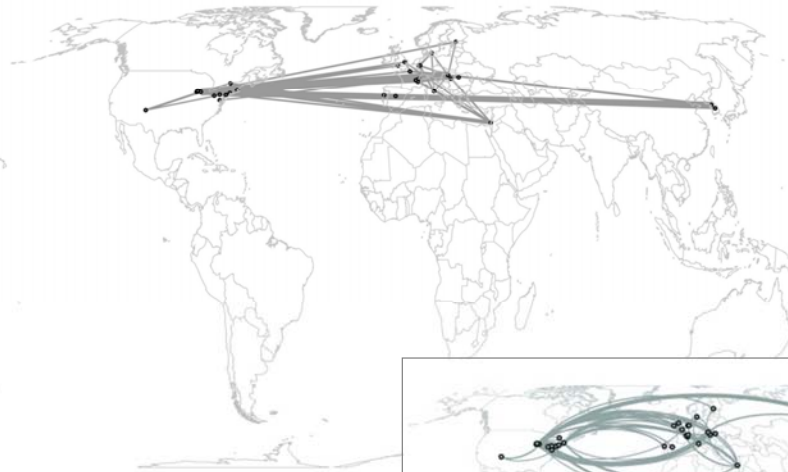

Layout network in Gephi

Combine geomap and network in Photoshop

Practice these steps using “LaszloBarabasi-collaborations.net” linked from Sci2 wiki:
4.7.6 Using Gephi to Render Networks Overlaid on GeoMaps

Geetha Senthil (2010) [Multidisciplinary Nature of Work With Reference to PIs and ICs Within a Portfolio](#). PA Group at NIH.

NIH Office of Extramural Research and Katy Börner (2010) [Network Visualizations Using SPIRES Data and the Sci2 Tool](#). Office of Extramural Research at NIH.

A number of other projects recently adopted OSGi and/or CIShell:

USA

- *Cytoscape* (<http://cytoscape.org>) Led by Trey Ideker at the University of California, San Diego is an open source bioinformatics software platform for visualizing molecular interaction networks and integrating these interactions with gene expression profiles and other state data (Shannon et al., 2002).
- *MAEviz* (<https://wiki.ncsa.uiuc.edu/display/MAE/Home>) Managed by Jong Lee at NCSA is an open-source, extensible software platform which supports seismic risk assessment based on the Mid-America Earthquake (MAE) Center research.

Europe

- *Taverna Workbench* (<http://taverna.org.uk>) Developed by the myGrid team (<http://mygrid.org.uk>) led by Carol Goble at the University of Manchester, U.K. is a free software tool for designing and executing workflows (Hull et al., 2006). Taverna allows users to integrate many different software tools, including over 30,000 web services.
- *TEXTrend* (<http://texttrend.org>) Led by George Kampis at Eötvös Loránd University, Budapest, Hungary supports natural language processing (NLP), classification/mining, and graph algorithms for the analysis of business and governmental text corpuses with an inherently temporal component.
- *DynaNets* (<http://www.dynanets.org>) Coordinated by Peter M.A. Sloot at the University of Amsterdam, The Netherlands develops algorithms to study evolving networks.
- *SISOB* (<http://sisob.lcc.uma.es>) An Observatory for Science in Society Based in Social Models.

As the functionality of OSGi-based software frameworks improves and the number and diversity of dataset and algorithm plugins increases, the capabilities of custom tools will expand.

Scholarly Database at Indiana University

<http://sdb.wiki.cns.iu.edu>

Supports federated search of 25 million publication, patent, grant records.

Results can be downloaded as data dump and (evolving) co-author, paper-citation networks.

The screenshot shows the Scholarly Database website. On the left is the login page with fields for 'IU User' and 'Non-IU User'. On the right is the search interface with a search bar, filters for 'Creators', 'Title', 'Abstract', and 'Full Text', and a list of search results with checkboxes for 'Medline (1998 - 2008)', 'NIH (1961 - 2002)', 'NSF (1985 - 2004)', and 'USPTO (1976 - 2007)'. The search results also include a 'Search' button and a 'Search' button.

Register for free access at <http://sdb.cns.iu.edu>

54

55

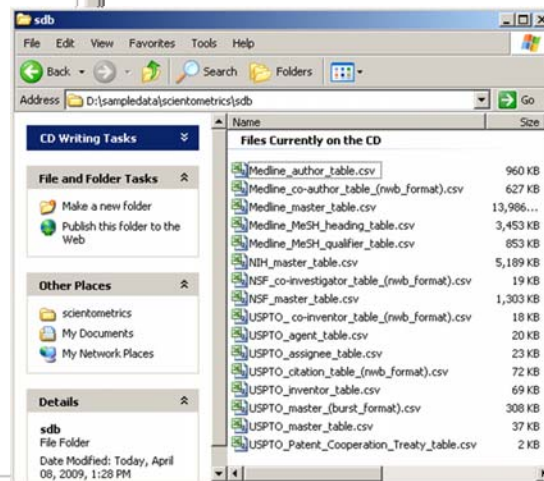

Since March 2009:

Users can download networks:

- Co-author
- Co-investigator
- Co-inventor
- Patent citation

and tables for burst analysis in NWB.
