CNS launched the inaugural Information Visualization MOOC (IVMOOC) in January 2013, attracting participants from more than 100 countries. The course provides an overview about the state of the art in information visualization, emphasizing a user-needs-driven process. Anyone interested in generating visualizations would benefit from the course, and there are also opportunities to work with real-world clients on a variety of data visualization projects. The course will reopen in January 2016.

The course can be taken for three Indiana University credits as part of the Online Data Science Program offered by the School of Informatics and Computing. Those interested can find more information at soic.indiana.edu/graduate/programs/data-science.

*Visual Insights: A Practical Guide to Making Sense of Data* was released in 2014 as a companion textbook to the course. It offers a gentle introduction to the design of insightful visualizations (ivmooc.cns.iu.edu/ivmoocbook14.html).
