“In the beginning was the word.”

AUTHOR UNKNOWN

λόγος

“You shall know a word by the company it keeps.”

—J.R. FIRTH 1957, 11

THENCE CAME WORDNET

WordNet Search - 3.1

- [WordNet home page](#) - [Glossary](#) - [Help](#)

Word to search for:

Display Options:

Key: "S:" = Show Synset (semantic) relations, "W:" = Show Word (lexical) relations
Display options for sense: (gloss) "an example sentence"

Noun

- **S: (n) meaning, [significance](#), [signification](#), [import](#)** (the message that is intended or expressed or signified) *"what is the meaning of this sentence"; "the significance of a red traffic light"; "the signification of Chinese characters"; "the import of his announcement was ambiguous"*
- **S: (n) meaning, [substance](#)** (the idea that is intended) *"What is the meaning of this proverb?"*

Verb

- **S: (v) [mean](#), [intend](#)** (mean or intend to express or convey) *"You never understand what I mean!"; "what do his words intend?"*
- **S: (v) [entail](#), [imply](#), [mean](#)** (have as a logical consequence) *"The water shortage means that we have to stop taking long showers"*
- **S: (v) [mean](#), [intend](#), [signify](#), [stand for](#)** (denote or connote) *"`maison' means `house' in French"; "An example sentence would show what this word means"*
- **S: (v) [intend](#), [mean](#), [think](#)** (have in mind as a purpose) *"I mean no harm"; "I only meant to help you"; "She didn't think to harm me"; "We thought to return early that night"*
- **S: (v) [mean](#)** (have a specified degree of importance) *"My ex-husband means nothing to me"; "Happiness means everything"*
- **S: (v) [think of](#), [have in mind](#), [mean](#)** (intend to refer to) *"I'm thinking of good food when I talk about France"; "Yes, I meant you when I complained about people who gossip!"*
- **S: (v) [mean](#)** (destine or designate for a certain purpose) *"These flowers were*

AND VISUAL THESAURUS

The screenshot shows the website **visualthesaurus.com** with the search term **meaning** entered in the search bar. The interface includes navigation buttons (BACK, FORWARD), a search bar with a **LOOK IT UP** button, and utility buttons (EDIT, PRINT, SHARE, HELP). Below the search bar are tabs for HISTORY, WORD SUGGESTIONS (50), MY WORD LIST, and SETTINGS.

The main content area displays a visual thesaurus for the word **meaning**. The word **meaning** is at the center, with a speaker icon. It is connected to several related words:

- substance** (top)
- signification** (top-left)
- significance** (left)
- import** (bottom-left)
- mean** (right)
- pregnant** (bottom-right)
- significant** (bottom)

On the right side, there are four category panels, each with an **ON** and **OFF** toggle:

- NOUNS** (red header):
 - the message that is intended or expressed or signified
 - the idea that is intended
- ADJECTIVES** (yellow header):
 - rich in significance or implication
- VERBS** (green header):
- ADVERBS** (purple header):

“In the beginning there was logocentrism.”

BUT WHAT IF LOGOCENTRISM IS WRONG?

Impossible!

Pragmatics and Non-Verbal Communication

Tim Wharton

CAMBRIDGE

Pragmatics and the domain of pragmatic principles

There is a point where too much information and too much information processing can hurt. Cognition is the art of focusing on the relevant and deliberately ignoring the rest.

(Gigerenzer and Todd 1999, p. 21)

RELEVANCE THEORY AND THE SHOWING-MEANING_{NN} CONTINUUM

In his William James Lectures on 'Logic and Conversation', delivered at Harvard in 1967, Grice proposed that human verbal communication is a cooperative activity driven by the mutual expectation that, in general, participants will obey a Cooperative Principle and Conversational Maxims of Quantity, Quality, Relation and Manner. In outlining his theory of conversation, one of Grice's main aims was to cast light on some of what he regarded as 'illegitimate applications' (1989, p. 3) of certain philosophical 'manoeuvres' by members of the ordinary language philosophy movement. This movement had influenced him greatly at Oxford in the nineteen-forties and fifties; in opposing the central tenets of the 'idealised' language philosophy of Frege, Russell and Carnap, it was instrumental in the birth and development of modern pragmatics.¹

Jerry Fodor's chief objection to modern pragmatic programmes (an objection shared by Chomsky) is that the processes involved in utterance interpretation are 'global' rather than 'local': any type of information, drawn from any domain, may make a difference to the outcome of the interpretation process, and in Fodor's view such processes are not amenable to scientific study (Fodor 1983).

AND SENTENCES

√(JSD)

EVERY STATEMENT THAT ANOTHER BEING POSSESSES PSYCHIC QUALITIES IS A CONCLUSION FROM ANALOGY, NOT A CERTAINTY; IT IS A MATTER OF FAITH.

1.0000

IF ANY CONSCIOUSNESS ACCOMPANIES IT, THEN THE NEAREST HUMAN ANALOGY TO SUCH CONSCIOUSNESS IS TO BE FOUND IN ORGANIC SENSATIONS, AND THESE, AS HAS JUST BEEN SAID, MUST NECESSARILY BE IN THE HUMAN MIND WHOLLY DIFFERENT IN QUALITY FROM ANYTHING TO BE FOUND IN AN ANIMAL WHOSE STRUCTURE IS AS SIMPLE AS THE AMOEBA'S.

0.8413

FANCY, FOR EXAMPLE, ONE OF US ENTERING A ROOM IN THE DARK AND GROPING ABOUT THE FURNITURE.

0.8239

THIS, OF COURSE, DOES NOT REFER TO THE POWER TO JUDGE DISTANCE.

0.8235

AGAIN, A BODILY STRUCTURE ENTIRELY UNLIKE OUR OWN MUST CREATE A BACKGROUND OF ORGANIC SENSATION WHICH RENDERS THE WHOLE MENTAL LIFE OF AN ANIMAL FOREIGN AND UNFAMILIAR TO US.

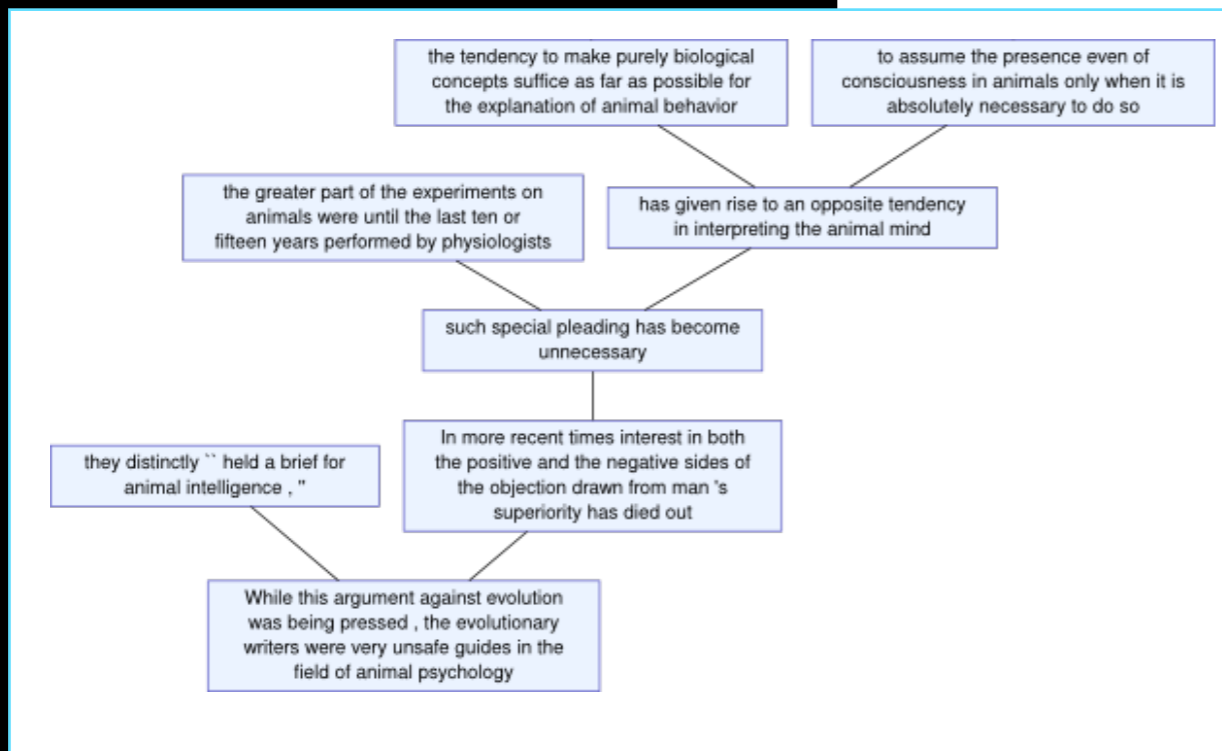

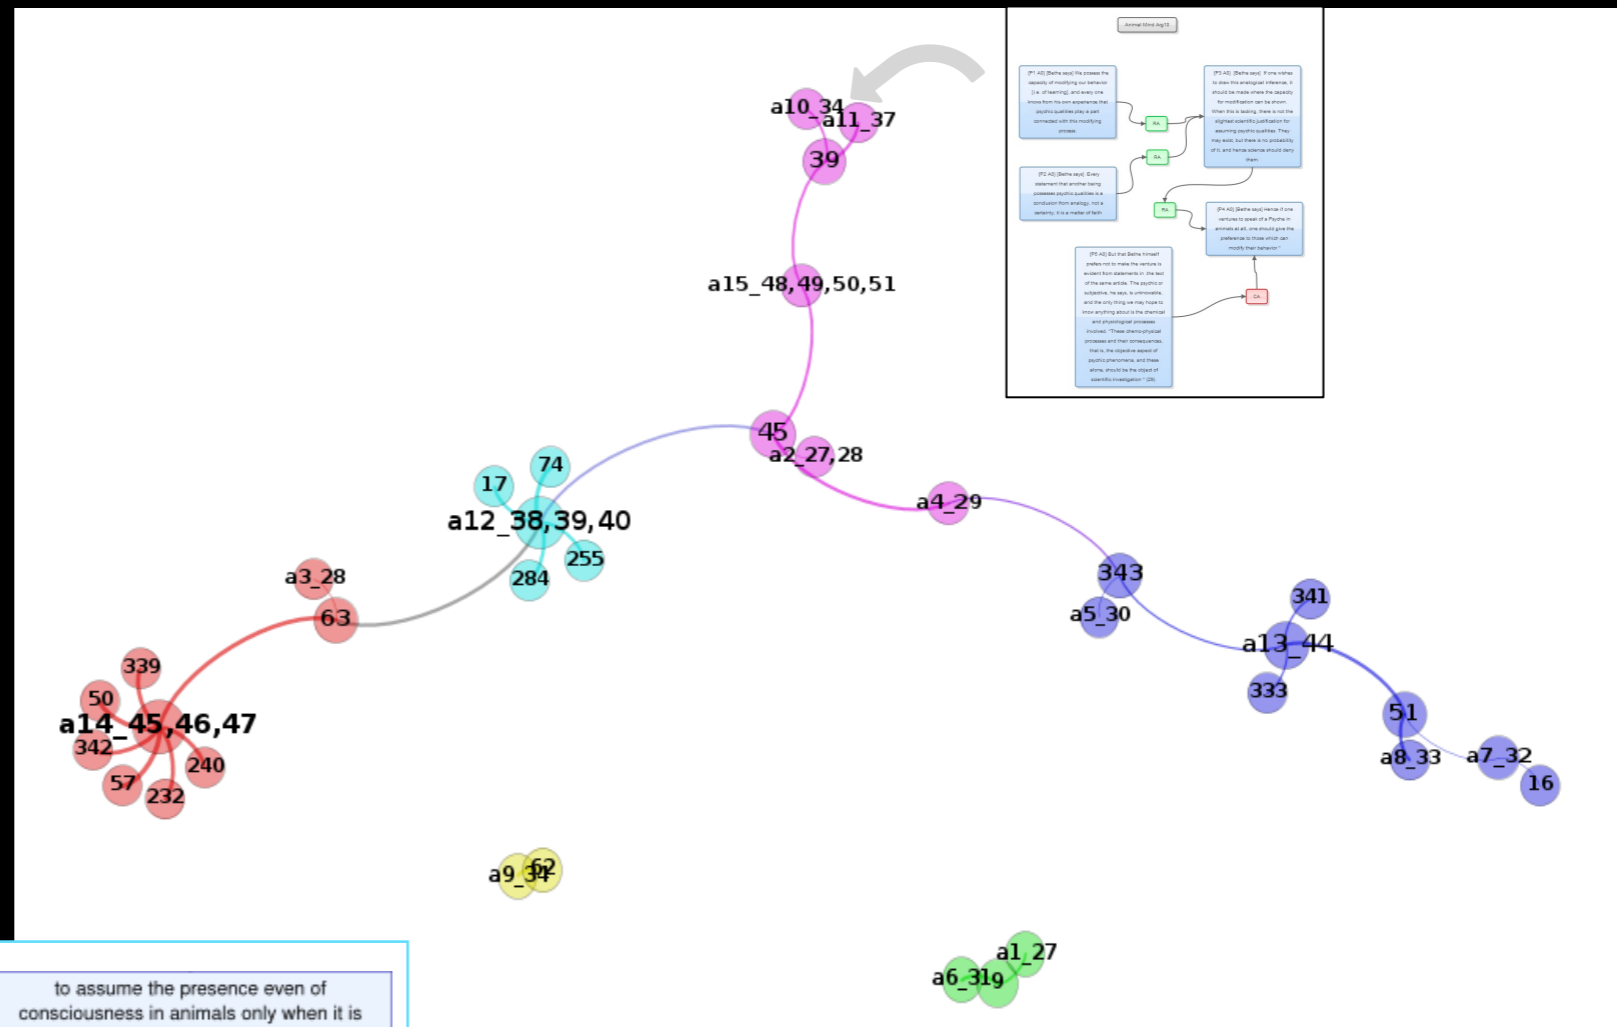

0.8224

SHE DISPOSES OF THE PSYCHIC LEARNING BY EXPERIENCE THEORY OF NAGEL BY SAYING THAT THE ONLY EXPERIENCE UPON WHICH THE ANIMAL COULD REJECT THE FILTER PAPER

0.8198

SEP Demo

The [Stanford Encyclopedia of Philosophy](#) (SEP) is the leading digital philosophy authority with over 1.2 million weekly article downloads of the more than 1,200 articles written by 1,600 authors and editors. It provides a comprehensive view of philosophy, and is ripe for topic exploration at a variety of levels. Clicking the button will populate the box with a random SEP article.

AP Demo

This corpus of 2,246 Associated Press articles is the original sample dataset for LDA, released by [Blei \(2003\)](#). It consists of short news stories from 1988-1990. Clicking the button will populate the box with a random AP article.

HTRC-1315 Demo

The HTRC-1315 collection comprises 1,315 full text volumes retrieved from [HathiTrust Research Collection](#) in 2013 with a search for the terms "anthropomorphism", "comparative psychology", and "Darwin". This corpus is meant to show how topic modeling can be used to improve corpus curation and is guided by real-world research practice for the history of comparative psychology. Use the search box to select a volume or click the button to populate the box with a random volume.
