## Open Call: Science Maps for Kids

The *Places & Spaces: Mapping Science* exhibit, at our academic partner Indiana University, has launched its 8th iteration with an open call for "science maps that kids aged 5-14 can use to gain a more holistic understanding and appreciation of science and technology." The selected maps are displayed in exhibits, published in print and online, and made available for purchase. This is a great opportunity to create and contribute maps that do two important things for young people: teach them about an aspect of science and interest them in mapping and visualization as a medium.

For consideration, submit your maps by January 10th, 2012. All the details can be found at: <http://scimaps.org/call/>

I would love to have a science map like this on my website. It could certainly appeal to people of all ages who are interested in science, not limited to kids. The only problem I think I will encounter is whether it will run properly as a flash based animation. Perhaps some **usability testing** could help me source out potential problems. I think this is a great way to educate kids about science.
