Mining, Mapping, and Accelerating Science and Technology

Katy Börner

Cyberinfrastructure for Network Science Center, Director Information Visualization Laboratory, Director School of Library and Information Science Indiana University, Bloomington, IN katy@indiana.edu

With special thanks to the members at the Cyberinfrastructure for Network Science Center; the Sci2, NWB, and EpiC team; and the VIVO Collaboration

March 23, 2012

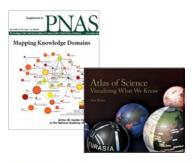

IN SUPPORT OF DISCOVERY

Plug-and-Play Macroscopes

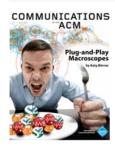

COMMUNICATIONS

Overview

- 1. Data mining and visualization research that aims to increase our scientific understanding of the structure and dynamics of science and technology.
- 2. Novel approaches and services that improve information access, researcher networking, and research management.
- 3. Data services and plug-and-play macroscope tools that commoditize data mining and visualization.

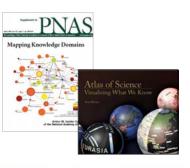

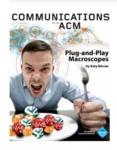

Overview

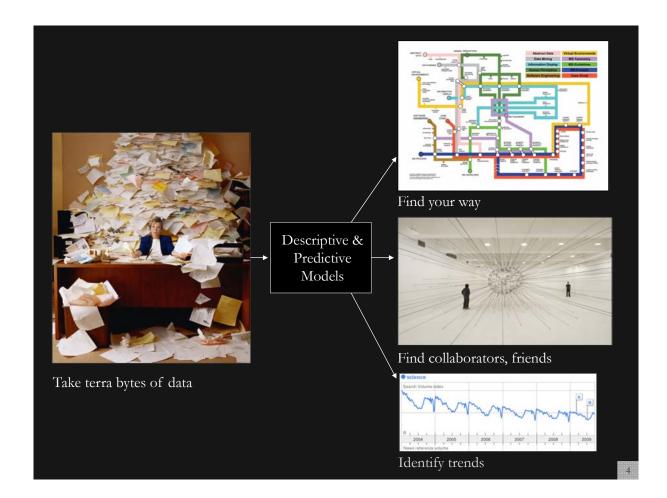

- 1. Data mining and visualization research that aims to increase our scientific understanding of the structure and dynamics of science and technology.
- 2. Novel approaches and services that improve information access, researcher networking, and research management.
- 3. Data services and plug-and-play macroscope tools that commoditize data mining and visualization.

Mapping the Evolution of Co-Authorship Networks

Ke, Visvanath & Börner, (2004) Won 1st price at the IEEE InfoVis Contest.

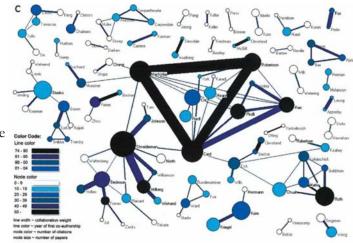

Studying the Emerging Global Brain: Analyzing and Visualizing the Impact of Co-Authorship Teams

Börner, Dall'Asta, Ke & Vespignani (2005) Complexity, 10(4):58-67.

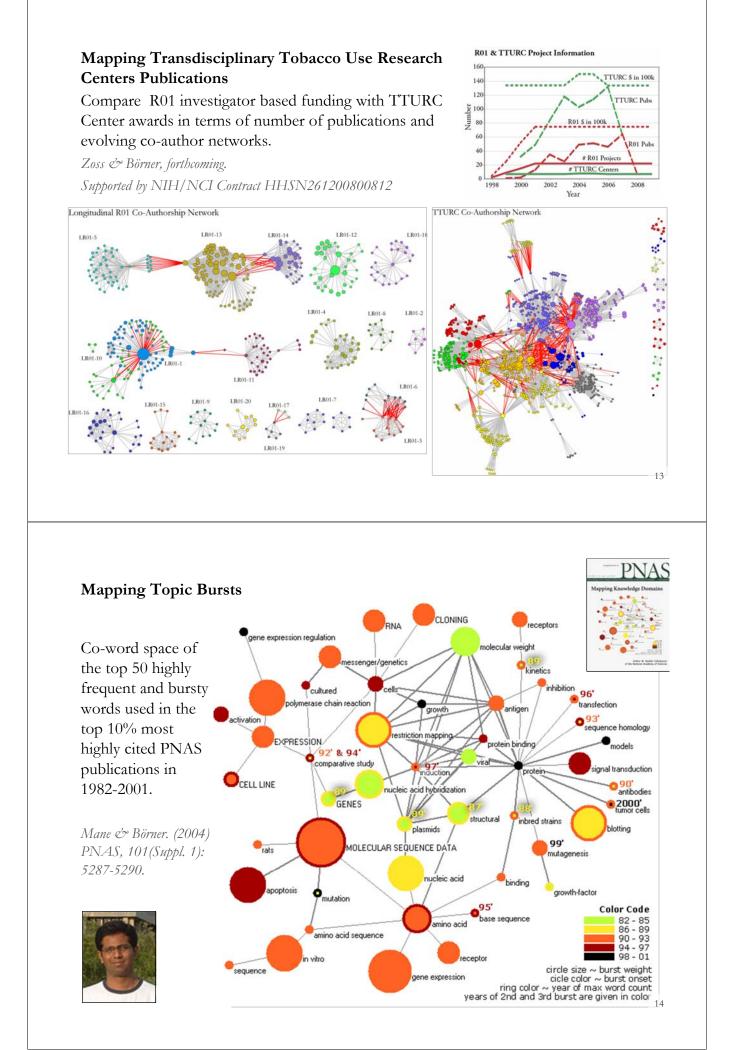

Research question:

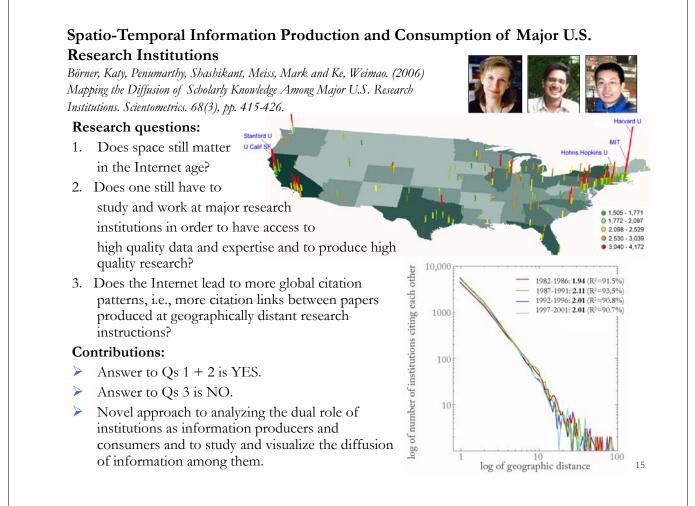

• Is science driven by prolific single experts or by high-impact co-authorship teams?

Contributions:

- New approach to allocate citational credit.
- Novel weighted graph representation.
- Visualization of the growth of weighted co-author network.
- Centrality measures to identify author impact.
- Global statistical analysis of paper production and citations in correlation with coauthorship team size over time.
- Local, author-centered entropy measure.

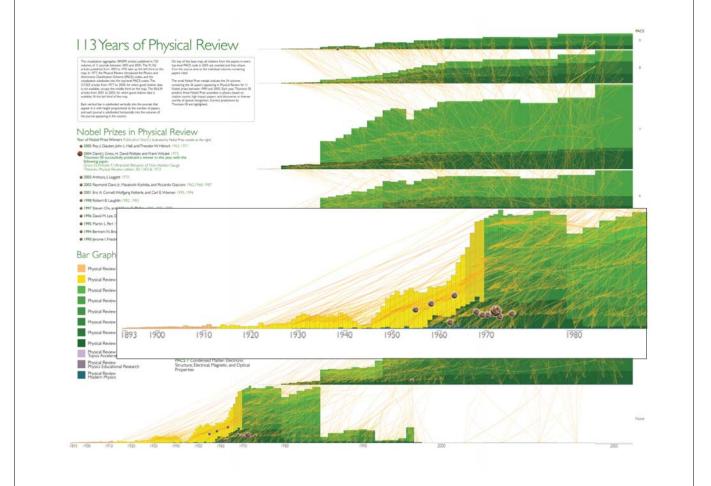

Exhibit has been on display at more han 200 venues in 19 countries on 6 continents.

Overview

- **1. Data mining and visualization research** that aims to increase our scientific understanding of the structure and dynamics of science and technology.
- 2. Novel approaches and data services that improve information access, researcher networking, and research management.
- **3.** Data services and plug-and-play macroscope tools that commoditize data mining and visualization.

Different Stakeholder Groups and Their Needs

Funding Agencies

Need to monitor (long-term) money flow and research developments, identify areas for future development, stimulate new research areas, evaluate funding strategies for different programs, decide on project durations, funding patterns.

Scholars

Want easy access to research results, relevant funding programs and their success rates, potential collaborators, competitors, related projects/publications (research push).

Industry

Is interested in fast and easy access to major results, experts, etc. Influences the direction of research by entering information on needed technologies (*industry-pull*).

Advantages for Publishers

Need easy to use interfaces to massive amounts of interlinked data. Need to communicate data provenance, quality, and context.

Society

> Needs easy access to scientific knowledge and expertise.

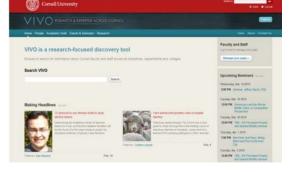

Scholars Have Different Roles/Needs

- **Researchers and Authors**—need to select promising research topics, students, collaborators, and publication venues to increase their reputation. They benefit from a global view of competencies, reputation and connectivity of scholars; hot and cold research topics and bursts of activity, and funding available per research area.
- **Editors**—have to determine editorial board members, assign papers to reviewers, and ultimately accept or reject papers. Editors need to know the position of their journals in the evolving world of science. They need to advertise their journals appropriately and attract high-quality submissions, which will in turn increase the journal's reputation.
- **Reviewers**—read, critique, and suggest changes to help improve the quality of papers and funding proposals. They need to identify related works that should be cited or complementary skills that authors might consider when selecting project collaborators.
- **Teachers/Mentors**—teach classes, train doctoral students, and supervise postdoctoral researchers. They need to identify key works, experts, and examples relevant to a topic area and teach them in the context of global science.
- **Inventors**—create intellectual property and obtain patents, thus needing to navigate and make sense of research spaces as well as intellectual property spaces.
- **Investigators**—scholars need funding to support students, hire staff, purchase equipment, or attend conferences. Here, research interests and proposals have to be matched with existing federal and commercial funding opportunities, possible industry collaborators and sponsors.
- **Team Leads and Science Administrators**—many scholars direct multiple research projects simultaneously. Some have full-time staff, research scientists, and technicians in their laboratories and centers. Leaders need to evaluate performance and provide references for current or previous members; report the progress of different projects to funding agencies.

VIVO International Researcher Network

VIVO: A Semantic Approach to Creating a National Network of Researchers (http://vivoweb.org)

- Semantic web application and ontology editor originally developed at Cornell U.
- Integrates research and scholarship info from systems of record across institution(s).
- · Facilitates research discovery and crossdisciplinary collaboration.
- Simplify reporting tasks, e.g., generate biosketch, department report.

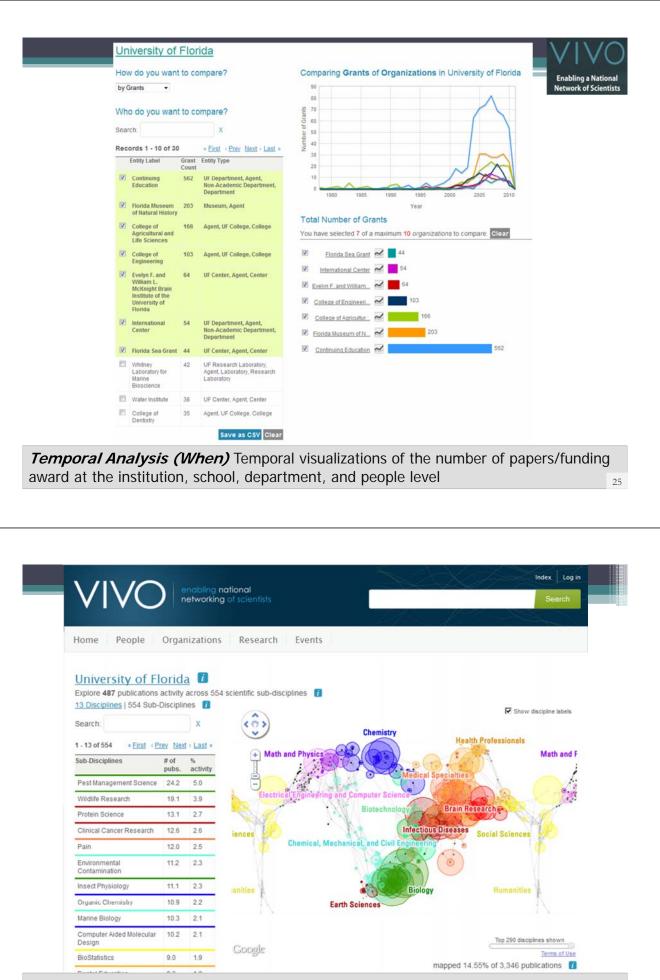

VIVO ENABLING NATIONAL NETWORKING OF SCIEN 23

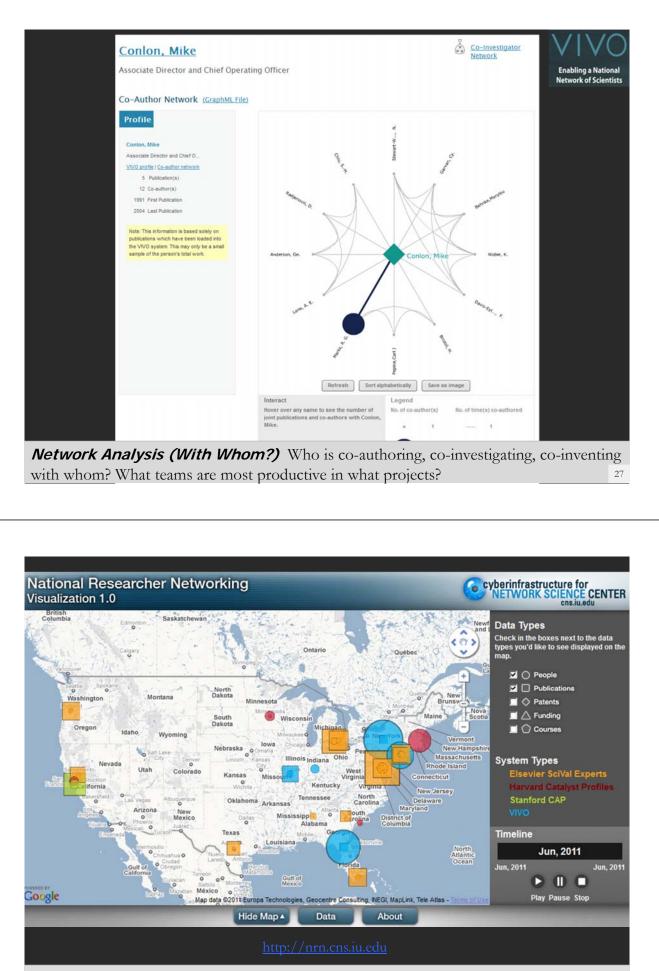

Funded by \$12 million NIH award.

Cornell University: Dean Krafft (Cornell PI), Manolo Bevia, Jim Blake, Nick Cappadona, Brian Caruso, Jon Corson-Rikert, Elly Cramer, Medha Devare, John Fereira, Brian Lowe, Stella Mitchell, Holly Mistlebauer, Anup Sawant, Christopher Westling, Rebecca Younes. University of Florida: Mike Conlon (VIVO and UF PI), Cecilia Botero, Kerry Britt, Erin Brooks, Amy Buhler, Ellie Bushhousen, Chris Case, Valrie Davis, Nita Ferree, Chris Haines, Rae Jesano, Margeaux Johnson, Sara Kreinest, Yang Li, Paula Markes, Sara Russell Gonzalez, Alexander Rockwell, Nancy Schaefer, Michele R. 🔱 INDIANA UNIVERSITY

Overview

- **1. Data mining and visualization research** that aims to increase our scientific understanding of the structure and dynamics of science and technology.
- 2. Novel approaches and data services that improve information access, researcher networking, and research management.
- 3. Data services and plug-and-play macroscope tools that commoditize data mining and visualization.

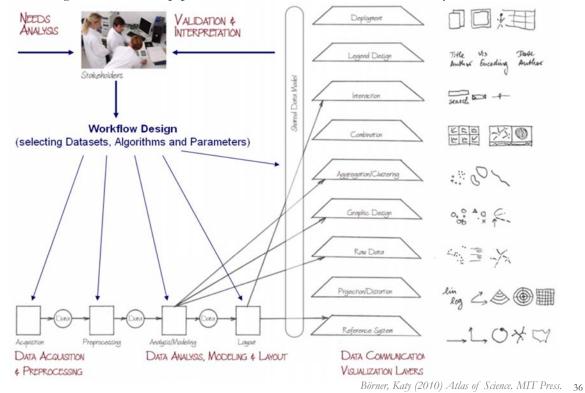

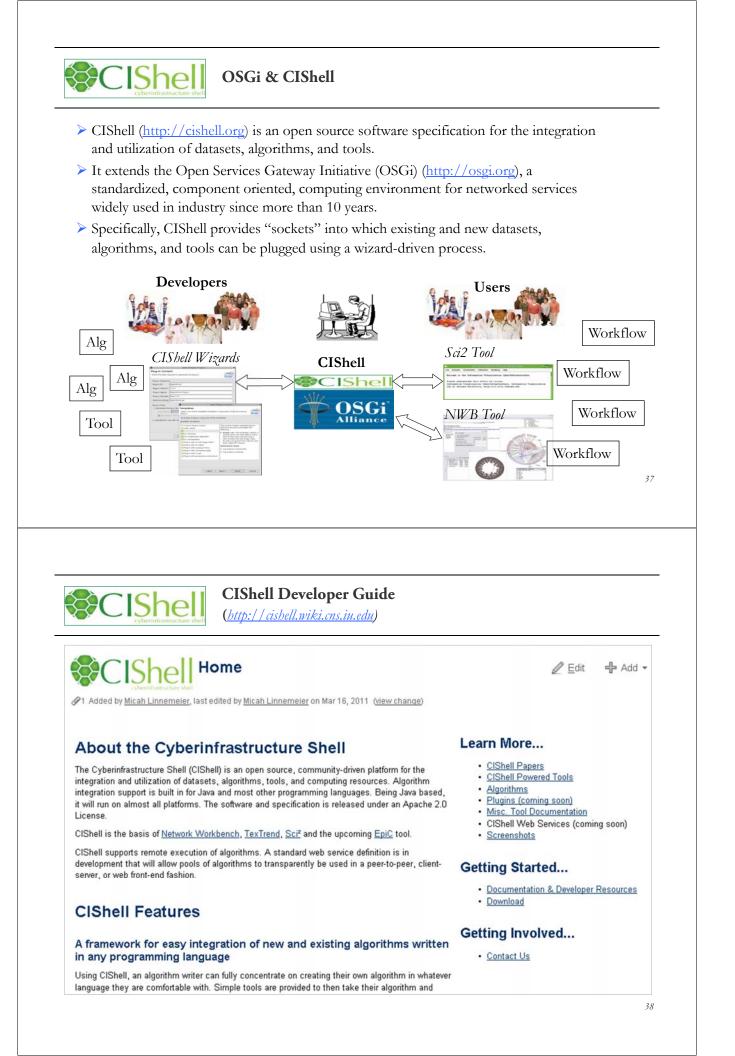

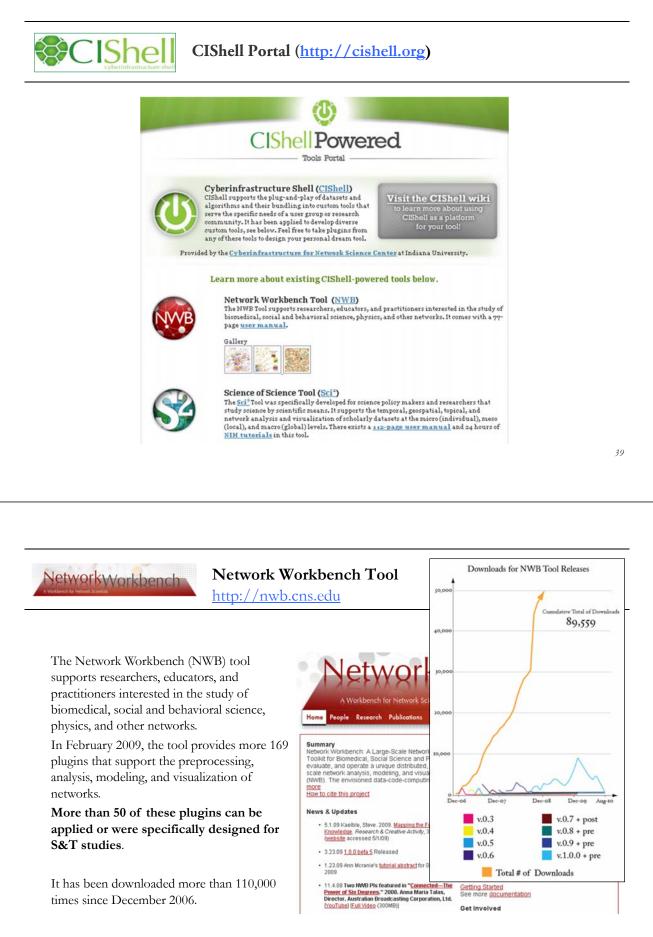

Needs-Driven Workflow Design using a modular data acquisition/analysis/ modeling/ visualization pipeline as well as modular visualization layers.

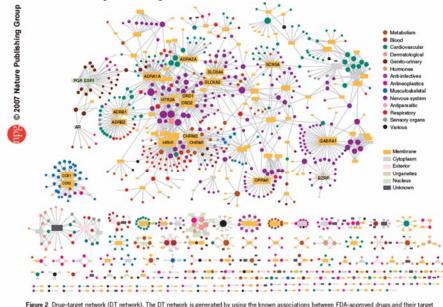

Herr II, Bruce W., Huang, Weixia (Bonnie), Penumarthy, Shashikant & Börner, Katy. (2007). Designing Highly Flexible and Usable Cyberinfrastructures for Convergence. In Bainbridge, William S. & Roco, Mihail C. (Eds.), Progress in Convergence - Technologies for Human Wellbeing (Vol. 1093, pp. 161-179), Annals of the New York Academy of Sciences, Boston, MA.

Computational Proteomics

What relationships exist between protein targets of all drugs and all disease-gene products in the human protein–protein interaction network?

Yildriim, Muhammed A., Kwan-II Goh, Michael E. Cusick, Albert-László Barabási, and Marc Vidal. (2007). Drug-target Network. Nature Biotechnology 25 no. 10: 1119-1126.
